Labor for Defense

There have been many Labor Days observed in the United States since the date's establishment as a National holiday in 1884. Yet this Labor Day, 1941, must stand out among all the rest for the weight of its importance as an expression of the spirit of our people, in these times. Because Labor is the hub of our Defense program's operation; because Labor is at work, to insure Democracy; because Labor daily proclaims its unity, the tributes paid it on this day shall be no empty phrases; but sincere expressions of a nation's awareness of the vital role being played by those who toil in shipyard and plane factory, in ammunition plants and gunnery; and just as valuable—in factories and businesses producing the daily needs of a civilian population which enjoys the world's highest standard of living. Without Labor to produce, to what avail would new products be designed. Without Labor to produce what purpose would there be to wealth. And without Labor to produce on a basis of all-out effort, what guarantee could we have of the safeguarding of our own civil liberties, and of the resurrection of Democracy for all the world to live by freely—when civilization awakens to a new dawn...
MISS ATLANTIC OCEAN

Wahlo Lovett Offers Flying Classes at Local Airport

Flying lessons are being given at Wahlo Lovett, field pilot, at the Newark airport, and to-date, six pupils have been enrolled in the institute.

The government-recognized courses of the eight-hour class are taken under the personal supervision of the instructor. James Crowell, of Elkins, who has been the field pilot for the past two months, will lecture on the part. Robert F. Durkee, a former county agent, and Robert Ross, of Elkins, have been assistant instructors.

Aircraft rentals are also featured in the field of little expense. Rates range from $5 in Newark to about $2 in Parkersburg and Wheeling.
Residents of Newark, especially the older ones who have changed your own tires, did your own grease-job, filled your home, you need not drain your yard, clean water in hog lots, and since heat causes a slump in milk production are to be expected. A broken milk prices at all stores apparent increase in milk production is too much.

**THE MACHINE that Farmers Built**

**IS GEARED to Times Like These!**

The government has asked farmers to produce more, more, more; more meat, more milk, more vegetables. Farmers are doing their patriotic best in the face of today’s demands. This plan provides a way for farmers to purchase supplies without fear of loss due to price fluctuations. From cooperatives have an important role to play in national defense. For purchasing and selling cooperative goods and services.

**FORMERLY A CARRIE**

**HISTORY OF THE CARRIE**

The Carrie was developed by Willard H. Stebbins, an experienced aviator, and was designed to be a simple, low-cost plane. It was first built in 1930, and was the first successful home-built airplane in the United States. The Carrie was a one-place, open-cockpit biplane, powered by a 60-hp Franklin engine. It had a wingspan of 28 feet, a length of 15 feet, and a weight of 900 pounds.

**FLYING THE CARRIE**

The Carrie was easy to fly and handle, and was capable of reaching a top speed of 120 mph. It was popular among homebuilders and amateur pilots, and many were built in the United States and around the world. The Carrie was produced by The Stebbins Aviation Company until 1936, when production ceased.

**FLYING THE CARRIE TODAY**

Although the Carrie is no longer in production, it is still flown by many enthusiasts today. There are several organizations dedicated to preserving and flying the Carrie, and it is often featured at aviation events and air shows. The Carrie remains a popular choice for homebuilders and amateur pilots, and is a testament to the ingenuity and spirit of early aviation.
