FEBRUARY 1954
Volume LVIII No. 2

MARYLAND AND DELAWARE - FEBRUARY 1954

G. N. Brancato, Section Director - Baltimore, Md.

WEATHER SUMMARY

Precipitation and snowfall totals were near the lowest ever recorded and temperature averages were near the highest of record during this February. The percentage of sunshine was above normal while the average speed of the wind was near normal. There were no severe storms or flooded streams reported.

Precipitation totals were below normal throughout the States of Maryland and Delaware. In Maryland, only February of 1901 was drier than this month, while in Delaware, it was the fourth driest February of record and the driest since 1941. Most of the amounts from near the District of Columbia northeastward to Cecil County and in Allegany County were less than one inch. Amounts were two or more inches below normal near the upper part of the Chesapeake Bay and in southeastern Maryland. Only in Washington County were amounts within one inch or normal. Maryland totals ranged from 2.06 inches at Clear Spring to 0.32 inches at Loch Raven Dam, while Delaware's amounts varied from 1.82 inches at Wilmington New Castle WB Airport to 1.03 inches at Newark College Farm. Precipitation was frequent but light in Garrett County through the month. However, to the east of Garrett County, very little precipitation fell during the first sixteen days. With very few exceptions, the greatest one-day amounts were reported on the 21st. Only about one-fourth of these greatest one-day amounts exceeded one inch. Although topsoil moisture was adequate for the season, the subsoil moisture condition continued seriously low and was generally unimproved during the month.

Snowfall in both Delaware and Maryland was near the record for lightness. Three years in more than 60 years of record in Delaware have had an average of only a "trace" for the month which was less than the 0.1 inch for this

month. The last occasion of a trace was in 1939. Maryland snowfall was only one-eighth of the normal amount. Amounts smaller than 0.9 inch have been reported on five occasions during the last sixty years. As usual, the heaviest snow fell in Garrett County. The remainder of the important amounts fell in northern Maryland as far east as Baltimore County. In Delaware and elsewhere in Maryland, monthly totals of snowfall were near or less than one inch. Although Garrett County had snow at frequent intervals during the month, practically all of the snow to the east of Garrett County fell on the 8-9th. In view of the lightness of the snow, traffic interruptions on the highways were brief and confined to limited areas.

Temperatures throughout the two-state area were well above normal. For some stations, it was the warmest February on record. For Delaware, only the February of 1909 was warmer, and, in Maryland, it was the third warmest February and the warmest since 1949. There was little variation in departures from normal over the Section, with most deviations being six to eight degrees above normal. Delaware stations reported mean temperatures which varied from 43.6° at Dover to 39.8° at Newark College Farm, and extremes were 75° at Milford on the 15th, and at Bridgeville, Dover, Lewes and Middletown 2 S on the 16th, and 6° at Newark College Farm and Selbyville on the 13th. Maryland mean temperatures ranged from 44.8° at Baltimore WB City to 33.1° at Sines Deep Creek, and extremes were 80° at Tonoloway and Hancock Fruit Lab on the 16th, and -3° at Sines Deep Creek on the 13th. The interval from the 13th through the 16th had the sharpest change in temperatures as readings climbed from the zero to twenty above zero bracket on the 13th, into the 70s on the 15th and 16th. The mildness of the month caused apprehension to the fruit growers of the eastern Appalachian Mountains. - H.L.A.
