Dear Bonnie,

We are leaving by train for Manhattan tomorrow Sunday and will be there from 2-8. The weather has been cool and fair until yesterday when it turned suddenly very warm and today is really warm. We are used to the freezing for there the apartment we have been at the Carlyle has been fine and comfortable and the restaurant is really excellent. The service there has been just a little over three weeks. The second week we have spent with the brothers at Wellesley. We have
been there several times when she
Come down to our apartment to see us.
She says the painting etc in your apart-
ment is finished now but they are not
yet there with the cleaning etc. She
your *heaven* some dresses to take to
*Index City*.

It has spent most of our time
with doctors. I need two more
consider. He says the *Cancerous*
and head *tumors* show no
desires and no organic difficulties.
His *fever* was high when we came,
high 90, and he brought it down.

He made a very close general
examination and found nothing. The
patient returned from Millersy last
Sunday. Dr. and decided on a fluid starvation
and abdominal examination. Dr. was
sent for and a decompression was
performed at Dr.'s request.

The exams from Tuesday to Friday
in the next three days were given. Her
condition has been less of distress
in that respect. That at least
is comforting for me your seven.
What we deplore as age rests on a certain age, and I think feeds certain that the recent pulse is due to a certain amount of heat. She had the grippe after we returned from Europe—and didn't realize she had it until she was practically in bed and she kept going when she should have been in bed. That, and the fact that she always goes so tired, and has a nervous temperament, and
the kind of life we have led in the last years, especially since we left
New York in 1946, has been a strain. The choices we had to
make, both in terms of finances and in terms of our futures,
are more and more apparent as time passes. In any event we know that it
is nothing organic and rest and

 treatment will get her back to good
He is being very good about it all and is willing to take more rest and take things more easily in general.

If she needs any attention in Mexico City, may (my friends) Cleary, who has the reputation of being one of the best heart men in the world, can I can (her) supplement and

treat her and give her Dr. (her)
I fear I told you that I am
wishing to see people.
This has to be a short letter.
I am in Baltimore Thursday. I
can make the arrangements for the
"effective date" of the long-term
loan for June 30. The law to the
opposite of the Attorney General is
the working for and it is in very
disaffecting form. Some difficulties
we had with the syndicate bodies
in there which were often the
father's delight and surprise. She
then realized the regret to be
able to write peacefully for a
while.

It seems pleasant to be here and
rest from our toils, and it seems
particularly pleasant to be here in
the Carlyle with you as well.

I look forward to seeing you
again. The weather is plea-

able.
He was born too good, but the scenes in August & September are seriously
fine. I will write you details about a
number of matters when I return
to Mexico City. It is really terrible
to lose the habit of writing
letters & hand! Heaven gives in
love & good wishes to you all,

Gladly, Faithfully yours,

King
