Dear Connie,

We have had a very full and interesting day since our arrival.

We spent much time preparing for the trip, but I
early morning. There wasn’t much to write about the trip, but
I hope we’ll send you letters at Trincedini, Rio, and Malta. In which, I hope
I will get real letters mailed from those seldom get to destination for
you put in the small post offices and destroying the letters.

I will dictate some letters to you and others tomorrow.

We have had a very full and interesting day as well.

Brenin and Trintendi were at the boat to meet us, and
the President and the Chief of Protocol who helped
us on the boat to the boat to meet us and
get some critical messages of greeting from the President
and to wish them a happy and
The President and the Chief wished us to pass on
any time. Bremner and I spent almost all of
Monday and Tuesday and a good part of Wednesday
and Thursday talking over the electricity situation and
Waldron, the Chief of Affairs, who is an old friend
of yours or friend of yours, gave me a good deal of time
as did some of his associates, as I wish to get some
electrician facts now. I feel that a good idea of the
present situation and problems and actually this electric
problem is fundamental to any maintenance of economic
and political and financial stability and the smoothly
functioning is very much acute than I thought, and
people have to be taken in the immediate future to
gain new equipment for the situation in produc-
tion. This in itself will be difficult enough, and nothing
can be done in that direction until there is adequacy
prior to Credit. It is a serious collection and
does not admit of further delay without creating
very serious problems for the economy and interna-

In delegating we decided to take an holiday then this week, for I hope I may be able to keep in this fundamental problem.

As you know this is Carnival, and while they don't celebrate Carnival there like in Rio, the business fares etc are very quiet in February which is the warmest month here. I wasn't able to hunt details for the week as there is nothing to be doing this evening.

President then gave me on Friday and Saturday it should have been nearly a short business call we got an interested that we chatted for alm.

most an hour. He looks very well, is in excellent spirits, for many problems as chief. He does have everywhere, but in full of optimism. It was fine to see him again and to exchange views. We talked a good deal of electricity and the code.
and while he appreciates the importance of electricity in the economy, one of the Code, I have the feeling that some of the associates in the government have not informed him of some of the most serious problems. This is often the case, where subordinates do not inform fully to come up with their own suggestions. I held the President I would like to have the privilege of talking with him on electricity and the Code very fully and utterly with President there and the President kind we could do this at his home about 9 days from now. I suggested it would be good to have Cerro to there also and the President was as good as to agree. We will have another time to talk over the whole problem with him, and my opinion is that when the President really has been adequately informed of an important problem, he not only fully
understand it, but does the necessity, in this case of course. The problem remains outside credit if real importance, but if the treatment will be the fundamental things, I hope our County will provide the credit.

I haven't had a word from you since we left and you promised to write me of your health! How is the shoulder? How is the heart and pulse? You really promised to write me a line so to know you are feeling. That is the most important thing. I want to know. I love a letter from anyone on this return to Mother and the family seems well. Need to listen and Edna phones and you will drop me a line twice every week about yourself. Thanking you once again.

I hope you find it may be useful. We are both very well - Endear - faithfully yours.
