CHARLES F. MARVIN, Chief

In Cooperation with Maryland State Weather Service

CLIMATOLOGICAL DATA

MARYLAND AND DELAWARE SECTION

JOHN R. WEEKS, Meteorologist and Section Director

PRICE: 5 CENTS A COPY; 50 CENTS A YEAR

VOL. XXXV BALTIMORE, MD., SEPTEMBER, 1930 No. 9

GENERAL SUMMARY

This September was unusually warm, as a result of the undue prolongation of summer weather. The mean temperature of 73.0° was 5.5° warmer than normal and but 0.3° less than the normal for August. It was the second warmest September of record, the warmest September being that of 1881. The month was also dry and sunny and was the third successive month of the summer drought. The rainfall was of the shower type, mostly light, and nearly all of it fell during the first and second decades. Monthly sunshine was between 5 and 10 per cent above normal. Relative humidity was low, being between 10 and 15 per cent below normal. The 12-17th was a humid period. The thundergust of the 16th caused slight damage in some localities. The prolonged dry weather gave opportunity for forest and grass fires.

Warm weather, with summer temperatures, prevailed during the 1st-3d, 6-7th, 13-17th, and 21st-26th. The weather was mild on the 4-5th, 10-12th, 18-20th, and 27-28th, and cool on the 8-9th and 29-30th. In the Allegheny Mountain region lowest temperatures were slightly above freezing and heavy frost formed on the 29th.

Monthly rainfall averaged 45 per cent of normal. Monthly amounts were less than 1 inch over the western third of the Eastern Shore, in southern Maryland, and in the southern and central portions of north-central Maryland; were between 1 and 2 inches in Worcester, Somerset, Wicomico, eastern Dorchester, Caroline, eastern Queen Anne's, and Cecil Counties, and in western Maryland and the northern third of north-central Maryland, except 2 to 3 inches in the northern third of the Blue Ridge Mountain region and in Harford County; were between 2 and 3 inches in central and eastern Kent (Md.) County; and were between 2 and 4 inches generally in Delaware, except 1 to 2 inches in the Milford district and 4 to 5 inches in the Dover district.

Rainfall averaged 58 per cent of normal in western Maryland; 37 per cent in north-central Maryland; 21 per cent in southern Maryland; and 52 per cent on the Eastern Shore.

Some relief from the drought was afforded by heavy thundershowers in central Baltimore, Harford, southern Cecil, and central and eastern Kent (Md.) Counties during night of 1st-2d; in the Bridgeville, Millsboro, and Princess Anne districts on the 7th; and in eastern Washington, northern Frederick, and northeastern Harford Counties in the afternoon or at night of the 16th; and by moderate to heavy thundershowers in southern Maryland, the District of Columbia, the Allegheny and northern Blue Ridge Mountain regions, southern Cecil and eastern Kent (Md.) Counties, and Delaware, except western Sussex County, on the 13th.

Owing to the continued great deficiency in rainfall, crops remained poor and pastures remained dry, except that both benefited locally from the generous showers mentioned above. In the northern-border counties and in Delaware pastures greened somewhat by the close of the second decade and continued so thereafter. Harvesting light yields of corn, tomatoes, tobacco,

truck, apples, peaches, and pears continued. Tomatoes (affected by dry rot) and tree fruit were small. Tobacco crop was about one-fourth of normal. In the Allegheny Mountain region buckwheat was harvested and digging of late potatoes, small in size, was in progress. Digging of sweet potatoes began during the closing week on the extreme southern Eastern Shore. Elsewhere late potatoes and sweet potatoes were failures. During the third decade grains were being sown in the western and central divisions. Streams, wells, and springs were very low. In some localities water was hauled for home and stock. Feeding of stock continued.

The summer of 1930 was warm, with a mean temperature of 74.4° , which is 1.3° above normal, and is the same as in 1899 and in 1911, and 1.5° less than in 1900, the warmest summer of record since 1872. This summer was the driest of record, with an average rainfall of 5.97 inches, which is 6.56 inches below normal, and 1.51 inches less than in 1894, the previous driest summer. The amount of sunshine and the number of days with 90° or higher and with 100° or higher were the greatest of record for any summer. The crop situation was the worst of record.—J. B., Jr.

PRESSURE

The monthly mean sea-level pressure at Washington, D. C., and Aberdeen was 30.00; at Baltimore, 29.98 inches. The highest at Washington, D. C., was 30.30; at Baltimore, 30.29; at Aberdeen, 30.30 inches—all on the 1st. The lowest at Washington, D. C., was 29.66 inches on 27th; at Baltimore, 29.66, and at Aberdeen, 29.68 inches—both on the 26th.

TEMPERATURE

The monthly mean for the section, 73.0° , is 5.5° above normal. The highest monthly mean was 76.4° at Crisfield; the lowest, 63.4° , at Sines. The highest, 102° , occurred at Bell and Frederick on the 1st; the lowest, 33° , at Friendsville, Grantsville, and Oakland on the 29th. The greatest monthly range was 64° at Bell; the least, 40° , at Crisfield. The greatest daily range was 45° at Lutherville on the 28th.

PRECIPITATION

The monthly average for the section, 1.47 inches, is 1.79 inches below normal. The greatest monthly amount was 4.34 inches at Dover; the least, 0.26 inch, at Rock Hall. The greatest 24-hour amount was 3.20 inches at Dover on the 12-13th. The number of days with 0.01 inch or more, 6, is 1 below normal.

RELATIVE HUMIDITY

The average percentages were: Washington, D. C., 8 a. m., 74; 12 noon, 43; 8 p. m., 56. Baltimore, Md., 8 a. m., 70; 12 noon, 45; 8 p. m., 56. Aberdeen, Md., 8 a. m., 82; 4 p. m., 54. Philadelphia, Pa., 8 a. m., 74; 12 noon, 52; 8 p. m., 61.

WIND

(By 3-cup anemometer, except 4-cup at Aberdeen, Md.)

The prevailing direction for the section was southwest. The total movement at Washington, D. C., was 2,523; at Baltimore, 5,439; at Aberdeen, 3,453 miles. The maximum velocity at Washington, D. C., was 22 miles from the northwest on the 16th and 27th; at Baltimore, 30 miles, and at Aberdeen 36 miles—both from the northwest on the 16th.

The departures from normal temperature and precipitation are computed only for such stations as have 10 or more years of record, but all complete reports are used in determining section or division means. Data in italics determined from surrounding sections. T. Precipitation is less than 0.01 inch rain or melted snow.

Reference letters, a, b, c, appearing in the table indicate number of days missing: For example, b represents two days, etc.

ff Post office addresses of these stations are as follows: Of Bell, Glenndale; of Coleman, Worton; of Fallston, Bagley; of Ferry Landing, Owings; of Great Falls, Bethesda; of Pleasant Hill, Owings Mills; of Public Landing, Snow Hill. f Also on other dates. *Custom House, Gay and Water Streets. **Weather Bureau Building, 24th and M Streets.

(Continued from page 33)

SUNSHINE AND CLOUDINESS

At Washington, D. C., 70 per cent of the possible sunshine was recorded; at Baltimore, 71 per cent; at Aberdeen, 62 per cent. For the whole section the average number of clear days was 15; partly cloudy, 12; cloudy, 3.

MISCELLANEOUS PHENOMENA (WITH DATES)

Aurora.—Baltimore and Grantsville, 29.

Fogs, dense.—Darlington, 12, 13; Fallston, 15, 25; Ferry Landing, 1, 9, 13, 15; Frederick, Millington, and on the coast, 15; Grantsville, 9, 10; Milford, 5, 15; Princess Anne, 12.

Frost, heavy.—Allegheny Mountain region, 29; little or no damage.

Hail, light.—Chewsville, 16.

Meteor.—Princess Anne, 9; bright in southwest.

Rainbow.—Baltimore, 13, 16; Grantsville, 26.

Thunderstorms (not general).—1, 2, 3, 6, 7, 13, 16, 24, 25.

Winds, high.—Northwest, 16 (thundergust), 27.
