DELAWARE COLLEGE REVIEW,
NEWARK, DELAWARE.

WHAT other States do for their colleges is a question of no little importance to those who are now working to secure an appropriation for Delaware College, and a question with which each legislator should and doubtless will make himself thoroughly familiar before deciding the question of aiding Delaware College and higher education within the bounds of our State.

That the higher education of the people is beneficial to the body politic is a question that none will argue: that colleges are the main centres of knowledge and wisdom is equally true; that they should be aided and supported as the great enlighteners and cultivators of the masses is a fact that all admit. These statements are verified by the vast amounts of money appropriated annually by state governments for the furtherance and advancement of higher education. Furthermore there is not a State in the Union (Florida excepted) that does not contain one college, and

there are but few States that do not support at least one college.

Colorado, "the great desert of America," boasts of one college and one university, the latter of which is stated by the Educational Report of 1881 to receive \$17,000 annually from the State. Yet this State is the youngest of the Union, and one would judge (assuming the action of past Delaware legislators to be proper and statesmanlike) that this State would be the least capable and least probable of any to make heavy appropriations for the collegiate education of its youths. But Colorado, with almost all other States, recognizes education to be the greatest factor in civilization, and the higher and more perfect the education, the higher and more perfect the civilization. Colorado stands not alone in supporting collegiate institutions. States that have proportionately larger debts and less money than Delaware, render great aid to the numerous institutions within their respective territories.

The Universities of Missouri and Minnesota receive annually from the State governments, \$27,000 and \$23,000 respectively (Educational Report, 1881,) while the University of Michigan received \$64,250 for the year 1881. The University of Kansas receives from the State \$30,000 annually; the University of Iowa \$20,000; the University of California \$36,597; the Indiana University \$20,000; Louisiana Agricultural College and University each \$10,000 annually from the State. Nebraska gives to its University \$30,000, and Ohio to its University \$20,000.

That these particular cases are Universities and Delaware College is but a college is true, but many of these institutions that now rank among the foremost in the land, were once colleges, and through the liberal aid of the States in which they are situated, have developed into Universities, and are accomplishing great works.

But in regard to what other States are doing for their colleges, the action of those States that received land grants towards colleges founded under that act is most interesting to Delawareans,

DELAWARE COLLEGE REVIEW.

aware and Delaware College come under aid. There are now in existence forty-eight colleges founded under the land grant act of '62. Thirty-two of the forty-eight are aided by State governments to the amount of from \$2,000 to \$10,000 per annum. Nine of the thirty-two institutions have extended their range of usefulness and have become Universities.

State aid given to colleges founded under land grant act of '62, for the year 1881, amounted to \$350,516 or an average of \$10,953 per college aided. But it might be asked, what does Delaware's position among her sister States, in the matter of advancing higher education? Delaware's record in this line is unenviable. This is one of the three States (Del., R. I., and Fla.) that have but one college. Delaware is the only one of the three States, (Del., N. H., and Fla.) that do not possess at least one university. It is most conspicuous among the three (Del., R. I., Florida,) that have failed to appreciate their appreciation for, and to recognize the value of, collegiate education by rendering aid to the institution.

This month is a sad one in the student's life. Would you question why, gentle reader? We would inform you that it is because the first day of this month came on Sunday. Perhaps there was nothing startling in that announcement, were you aware that on that day the "Father of His Country" first saw the light of this world, on that account, it has become a National holiday, and one which we hoped to enjoy this year.

But when we looked at the calendar to see how many days off it was, we were startled, indeed, and confounded to find that it came on a Monday. A holiday that is not a holiday! And what makes the matter worse, we cannot blame anybody but the man who invented the calendar; as he is out of our reach, we cannot vent our anger upon him! Neither can we write a pathetic appeal upon the heartlessness and cruelty of our country in not granting the day. We hear it everywhere. It seems in the air. Everybody seemed to know if we were going to have a holiday or not. Washington's Birthday. The first time we heard it we smiled a sickly smile, the second time we groaned "mad upon him," and the third time we were ready to fight; but when, being about to

have our locks trimmed and some of the superfluous hair removed from our face, the talkative barber asked us whether we were not going to the matinee on Washington's Birthday, we were too full for utterance, and grabbing up our hats frantically flew to another tonsorial artist, (they are all artists), who talked of something more pleasant. We really believe that if that second barber had mentioned Washington's Birthday we should have attempted to use his sharp weapon upon himself. There is one consolation, however,—we are not alone in our sorrow. We picked up a recent number of the *Harvard Advocate*, and in it noticed an editorial upon the graciousness of the Faculty in finally acknowledging that "one G. Washington" had once lived and that he was born on the 22nd of February. After commenting at some length, it closed with an N. B., which requested the reader to consider the editorial as unwritten, since they had discovered the fact that so startled our blissful repose.

INASMUCH as the gymnasium of Delaware College has not the finest appliances and is not the most commodious of college gymnasiums, its present meagre fixtures and advantages would be greatly enhanced if a number of the superfluous benches were removed from under the trapeze, and from in front of the bar and from around the poles and ladders. Instead of removing the benches to some vacant room, when the new chairs were arranged in the Oratory, the cumbersome benches were stacked in the gymnasium, greatly inconveniencing those who were in the habit of exercising, and discouraging others who wished to form that good habit.

It doubtless is the unanimous desire of the students that the gymnasium be cleared of its rubbish and be put in fit condition for them to begin training for the Spring sports. Let us have fewer benches in the gymnasium.

THREE Senior debates and Junior orations which are now engaging the study of the members of those classes, seem in most cases to involve the necessity of careful research. They require considerable labor. Where are these students to find their materials? Echo whispers that Delaware College has a library of 12,000 volumes stored

away in a cold, seldom opened room. In this library are to be found standard volumes on political, metaphysical, economical, scientific, biographical, historical, and legal subjects. Why cannot the Library be opened daily for consultation and the reading of books, as the Reading Room is for the perusal of periodical literature? Could not some one be placed there as superintendent during the prescribed periods? A stove and a few chairs would make the Library a very attractive room for many of the students. The expediency of making the Library also the Reading Room has been suggested by some of the students, and may be worthy of consideration. Whatever will tend to throw the students into the company of the book-makers and introduce them into a new and larger world of thought is not to be underestimated.

WHILE the study of the Classics in our college course may be considered, and doubtless is for all, a training of the mind,—to some students it may perhaps be nothing more—to many students, however, it is also the acquisition of a particular branch of learning which in after life is to be used constantly as an intellectual tool. It has been said that a knowledge of Latin and Greek are essential to a correct and complete English education; to which we might also add that it seems almost equally as necessary to even a strictly so-called scientific or polytechnic education. To illustrate the truth of the saying, we have but to take the most cursory glance into the literature of our vernacular to find there innumerable and priceless gems from the caskets of the ancients set in the rich frame of our own language. And as if poetry and philosophy were not enough to make us debtors to the Greeks and Latins, science and art continually remind us in their terminology of the homage we owe to Athens and Rome as the centres of civilization and culture. What we want, therefore, in our study of the ancient languages in college is such a thorough training in them as will give us a large vocabulary for use at all times, no less than the paradigms and syntax of the grammar. Now, we respectfully submit to the authorities of Delaware College that the most painstaking application to the text-books of the regular course (always with a dictionary and grammar in hand) will not alone

ensure that readiness and exactness in extemporary translation which may properly be expected after three or four years' recitation to a professor. While a student may be up on the *text-books*, he may nevertheless be wholly unable to translate intelligibly at sight a detached sentence of Greek or Latin which he finds here or there in some English composition. It ought not to be supposed necessary for him to consult the lexicon for many of the words, for the passage quoted is most probably one well-known, or something couched in words which ought to be familiar to him. We venture, therefore, to call the attention of our respected Faculty to the consideration of some plan by which the greatest efficiency in the study of the Classics may be ensured and their practical use made more manifest. It is not for us to lay down the details of such a plan, but if we may be pardoned the suggestion, we would refer to that arrangement in many other collegiate institutions by which the regular recitations are supplemented by what with us would probably be most satisfactory as an extraordinary optional lesson in sight-reading, one or two periods a week. We commend the matter to our *senatus academicus*.

In connection with the subject of extemporary translation, we may appropriately call attention to that excellent publication, *Latine*, edited by E. S. Shumway, Adjunct Professor of Latin in Rutgers College. The scope of the magazine is largely indicated by the following sentence from Seneca placed at the head of each issue: "Iter est longum per præcepta, breve et efficax per exempla." It certainly seems a rational plan to teach any language, even a "dead" one, by putting it before the student practically, on his tongue and its various forms in his head until it becomes a second nature to him. Each issue of *Latine* contains passages from the Classics for extemporary translation, English lyrics done into classical or scholastic verse, notes on synomyms and etymology, &c. We have been much pleased with the numbers we have seen.

WE would respectfully suggest to the Faculty that there could be a decided improvement on the present system of marking disorders and non-excused absences. As the system now

DELAWARE COLLEGE REVIEW.

ere is no chance for explanation what-, as even the "powers that be" err at dents are often unjustly marked for acts they were not guilty. This has occurred mes to our knowledge. A student does not know when a disorder mark is placed to his until the end of the term; when, if it is so, it requires much trouble to make the nasmuch as the marks are all placed on er, and, as considerable time may have once it was given, it is hard to trace the . As a remedy, we propose that a week- of these marks be made by the Faculty ed on the bulletin-board or read in the o the students, so that they can at least pportunity to make an explanation or to n error.

are having very cold weather. Every- ing is more or less frozen. Some of the f our students, especially those of the , (Botany, in particular,) get so frozen heads that the Professors are unable to out again. At any rate, poor Freshie have a "cold day" of it, when he gets ass-room. But lessons are not the only zen up by the present "cold snap." The A. seems to have been frozen to death. not some of our ardent and professed students resuscitate the Society? Some are active Christian workers in their sev- ches. Why do they not bring some of usiasm and undoubted ability to bear weak and indifferent students in college?

Club seems to have perished from cold s would be a better word. Its last is heard a few evenings ago on the col- co. The sweet singers of Delaware were to be serenading a young lady visiting lding, but "Bohunkus," "Last Cigar," "We'll never get drunk any more," Brothers, Punch," &c., were all that ray on the frosty air. Perhaps more al songs were frozen up down in the pas- h of the singers. We hope "spring, ing" will thaw them out. The plans tention of the Oratory are also proba- up. We are assured that they will of their winter hiding-place sometime mning season. Speaking of the Oratory, a student announce one cold morning rs would be held out front on the por- teps, where all could get the benefit of heat. We smiled at his happy suggest- should be warmer out there than in the The prayers that now ascend, while be wasted on incense—the incense of

frosty breaths—are yet wholly lacking in *fervor*. But spring will regulate this matter also, we suppose. Active preparation for Field-Day has also suffered from the "cold snap." Not only is the Field frozen, and the Day frozen, but the thought of it is also frozen. Will the balmy days to come cause the Field-Day to spring up and bear fruit? We hope so. Is the Board of Agriculture bill frozen in the Legislature? If so, turn on some legislative sun and let it thaw out.

But we weary enumerating the things about Delaware College that seem to be frozen up. It may be that we do injustice to the weather by attributing all these evils to it, but this seems the most reasonable explanation. If we are wrong, perhaps some one of the scientists on the Faculty will give us some other theory by which to explain the phenomena. We "pause for a reply."

P. S. Sometime after the above was written, the temperature moderated, and some of the frozen subjects thawed out, as we expected they would do. One of them is the Y. M. C. A., which revived on the 19th inst., through the ef-forts of Messrs. Polk, '86, and DuHamel, '86, who were assisted by Messrs. Morrison, '88, and Eckel, '86. A large and interesting prayer-meeting was conducted, and regular Thursday night meetings will hereafter be held at 6.30 o'clock, to which all students are earnestly and cordially invited.

Another matter brought out by the thaw since our editorial was written, is the extension of the College buildings, as will appear from the report in another column of the meeting of the Board of Trustees at Dover recently.

OUR *De Alumnis* editor finds considerable difficulty in making up his column of personals. It is a difficult matter to keep the run of our Alumni, and to find when they change their abode or occupation. But we are all interested in this news, and we desire the REVIEW to furnish its readers with it. We therefore request the Alumni to remember their Alma Mater and substitute active interest for indifference and negligence. We desire every change in the lives of our Alumni to be noted, and will have them noted, if those who are most interested will let us hear from them occasionally.

A LUMNI and old friends of Delaware College will regret hearing of the serious illness of Dr. Mackey, Professor of Ancient Languages, but not more than we regret chronicling the news. The Professor has been obliged to relinquish his Chair temporarily, an arrangement which we hope may speedily be brought to an end by his return to College.

Literary.**CYCLING.**

The bicycle has been in existence for about ten or twelve years. The tricycle in its present form is an invention of more modern date, and has been before the public only four years. In this short time these machines have attracted numerous and enthusiastic votaries, and have given rise to an entirely new feature in the sporting world that bids fair to be, if it is not already, the most interesting and exciting of sports. Not only are these machines an invaluable addition to sports, but they have gained a high reputation for their usefulness. Men of all professions, business pursuits, trades and employments have recognized the advantages they possess, and have devoted them to their use. It is natural that a machine should acquire popularity that will enable a man, not otherwise assisted than by his own strength, to run a mile in two minutes and thirty-nine seconds, to travel twenty miles an hour, and two hundred and sixty-six miles a day. But not alone to speed do cycles owe their reputation, but more to the new and enjoyable form of recreation to which they have given birth. That class of the community that are unable to sustain the expense of horses and carriages, and whose pleasures are greatly limited in comparison with their wealthier neighbours, is thus enabled to participate in a pleasure that is pronounced by some to be unsurpassed.

It is our purpose to give in this article a short history of the bicycle and tricycle, their uses (and abuses,) the new interests to which they have given rise, and the advantages derived from them by the public. We are indebted for most of our data to an article on *Cycling* that appeared in a recent number of *The Nineteenth Century*.

The word "cycling" in England is the word applied to the use of the bicycle or tricycle; while "wheeling" is the term adopted by the Americans. England may be considered the home of cycling, as in that country the largest manufacturers and largest Unions and Leagues exist.

The first machine that holds any claim to be the primitive bicycle was invented in France. A strange machine, consisting of a seat placed centrally upon a bar of wood and supported by wheels at either end, made its appearance in the gardens of Luxembourg, in Paris, about the year 1808. It was propelled by a rider sitting on a seat and striking the ground out backwards after the manner of an awkward boy skating fast. This machine was called the "hobby-horse," and was soon laughed out of existence. Various other machines of similar character were invented, such as the "dandy-horse," "Draiseme," &c., but these shared the fate of the hobby-horse. It was not till 1860, when some unknown genius conceived the idea of putting cranks and pedals on

the front wheels of the dandy-horse, and then began the construction of the modern bicycle. This machine made in 1860 was appropriately called the "bone-shaker," as it was heavy, clumsy, and perfectly awful in its vibrations. But since the invention of the suspension wheel and the introduction of hollow steel felloes, wire spokes, and rubber tyre, a machine can be built weighing but 27 lbs, to carry a man of 155 lbs.

As to the manufacture of these machines, it is stated that at Coventry, Eng., the home of the cycling industry, over 3,000 hands are employed. There are 145 manufactories of these machines. Although simple enough to look at, the construction of the bicycle and tricycle is very complex and difficult, there being between 300 and 400 different pieces in each machine. The labor that they require is the cause of their high price. Prices vary from fifty to two hundred and seventy-five dollars. As to the number in existence, "it may be taken as a fair approximation," says Viscount Bury, "that between 300,000 and 400,000 persons are to be found in the ranks of the habitual bicyclist." This number does not include the thousands of tricycles in use.

The bicycle, though light, swift, and graceful, cannot be said to be an elderly gentleman's mount, as it is difficult to ascend to the saddle and rather shakey to remain there, and so the tricycle was invented on principles as to propelling similar to those of the bicycle, but on much firmer foundations. The latter machine is growing in popularity, especially among elderly, reserved men. Nor is its use confined alone to the male sex. Women can be seen flying through the public squares and thoroughfares of our National Capital with ease and rapidity.

The amount of inventive genius put upon cycles in the past twelve years is wonderful. There are no less than three hundred and twenty-four different kinds of tricycles, each possessing some special merit, and there are twice that number of different kinds of bicycles.

Tricycles are now used for the distribution of newspapers in Paris, and the distribution of both mails and newspapers in London.

Unions and Leagues are formed in every country for the purpose of ensuring a fair and equitable administration of justice as regards the rights of cyclists on the public roads; to watch the course of legislative proposals as affecting the interests of the cycling public; to secure the conveyance of machines by railways; to examine the question of bicycle and tricycle racing in general; to form laws by which amateur bicyclists are governed; to arrange for racing, meetings, parades, &c. These leagues are powerful in influence and in numbers. The Cycling Touring Club is composed of 16,625 members.

Aside from its utility, the speed which can be

DELAWARE COLLEGE REVIEW.

red on a bicycle is the most interesting feature of cycling. As regards speed for a mile or here can be no comparison between the of a horse and that of a bicycle. The is far the speedier. But after twenty or fifty miles, the horse comes back to the

'Maud S.' trotted one mile in $2.9\frac{1}{2}$; the pion time for a bicycle for that distance is 'Lady Mack' trotted 5 miles in 13 minutes; Hiller has done it in 14.8 minutes. 'Conr' did 10 miles in $27.23\frac{1}{4}$; Mr. English nplished that distance in $29.19\frac{3}{5}$. Twenles was done by the horse 'Capt. Gowan' 8.25; Mr. English accomplished it in 3.5. But after twenty miles the man rapidly to the front. The best 50 miles on record one by 'Ariel' in 3 hr., 55 min., $40\frac{1}{2}$ sec., the Hon. Ion Keith-Falconer rode that dis on a bicycle in 2 hr., 43 min., $58\frac{3}{5}$ sec. queror' traveled 100 miles in 8 hr., 35 min., c.; F. R. Fry on a bicycle did it in 5 hr., in., $52\frac{5}{6}$ sec. No trial of a horse above miles is on record; a few weeks ago a perer on a new style bicycle called the "Kan" rode 266 miles in 24 hours.

Cycles can justly be said to rank among most wonderful inventions of the nineteenth century.

PRIMUS.

THE STATE LIKELY TO AID ITS OWN COLLEGE.

A meeting of the Board of Trustees held at r, on the 10th of February, 1885, was a very onious one and will probably result in good e College. At the suggestion of Dr. Hugh artin, a member of the Board and one of enators from Sussex, a resolution was adopted te appointment of a committee to report a of relief to be considered at an adjourned g of the Board on the 24th inst. It is unod that a memorial will be presented to the tature asking for an appropriation in some to repair, improve and enlarge the college ing.

The opinion was unanimous that the State in ting the grant of \$83,000 from the General rnment to establish a college had contracted provide and keep in repair the necessary build-apparatus and appliances. The simple readf the Act of Congress of 1862 making the and of the act of the Delaware Legislature d in 1867 accepting the terms of the grant such a conclusion unmistakable. Several ers of the Legislature whose attention was to this legislation for the first time during eeting expressed their surprise and declared he State must keep her agreement with the ral Government. The only question being the extent of the repairs and the enlarge-requisite to comply with the act of Congress.

The present building, which was erected in 1832, has been standing for 18 years without any repairs except that of a new roof put on nine years ago and paid for out of the proceeds of a legacy received under the will of a lady who lived in Philadelphia.

The entire building has been used by the State for her college during the past fourteen years without any expense to her whatever, and she absolutely owns a moiety of the building, grounds, apparatus, libraries, and other appliances without ever having paid a cent for them. And as the State in fact owns and controls this property, Mr. John A. Reynolds, one of the members of the Board, very sensibly suggests that the other moiety of this property shall be delivered over to the State so that she shall be in name as well as in reality the owner of the entirety. We are informed that this suggestion meets the approval of every one of the Trustees, hence it will no doubt be consummated. We understand there are two plans mooted for the application of the relief sought after. The first is to ask the Legislature to issue a certificate of indebtedness in the sum of \$50,000 to remain in the treasury of the State as the present certificate of \$83,000 does, and to bear interest at the rate of 6 per cent. per annum, thus yielding \$3,000 yearly, which is to be devoted exclusively to the repairing, improving and enlarging of the buildings, apparatus and appliances.

The other proposition is to appropriate \$5,000 a year for two years, and then the further sum of \$5,000 conditioned upon the raising of the same amount by the individual friends of the college.

Either of these plans would answer the purpose, but the first, it seems to us would be preferable because it would be permanent and would put the welfare of the college beyond peradventure. One thing is certain, something should be done and that right speedily. The laboratory with its fumes ought to be put off to itself. The Oratory ought to be enlarged and a gymnasium and drill-room provided on the ground floor. A proper room should be fitted up for the nice cabinet of minerals owned by the college. Then an observatory might be erected on the new portion of the Oratory building. Better halls should be furnished for the literary societies, and good commodious rooms provided in which "the related branches of agriculture and the mechanical arts" can be properly taught. The whole building should of course be thoroughly repaired and painted so that Delaware College shall be a credit to the little Diamond State.

AMICUS.

Cunning leads to knavery; it is but a step from one to the other, and that very slippery; Lying only makes the difference; add that to cunning and it is knavery.—*La Breyre.*

Locals.

Puns.

Skating-rink.

Mustaches (?)

Washington's birthday ! ! !

Dances are things of the past.

A Whist club is to be organized.

By gad! Genemen! can't help it.

The Juniors have about finished *(Edipus Tyrannus)*.

" Gentlemen, the world is getting wiser and worser."

Knock at door. Within: " Who's there ?" Prof. " Me,—I—I!"

The prospect of a Field Day this year is decidedly slim, to say the least.

Prof. in Study of Words: " What is the subject of to-day's lesson?" Fair student: " The *immortality* of words, isn't it?"

The Rev. A. A. Benton of the Faculty has declined an invitation to the Rectorship of St. Thomas's P. E. Church in this town.

Breathes there a man with soul so dead,
Who never to himself hath said,
I love a Mother Hubbard?

On Jan. 17th the night express, on the " P. & W. R. R.," had a smash-up. The conductor was out all night and looked badly bunged up when he put in an appearance next morning.

The Senior Class completed International Law on Feb. 2nd, and began the Science of Law, (Sheldon Amos), in its stead. Metaphysics was completed by that class on Feb. 11th and Bascom's Aesthetics begun.

Daniel Pennewell, catcher on the Wilmington Conference Academy nine, in the Delaware—W. C. A. game of last Spring, was drowned on Jan. 23rd, while skating. Pennewell was an excellent fellow and universally admired by all who knew him.

Our Prof. of Analytics asked a few days since a student a question that he had been asked a year or two ago, but the student had unfortunately forgotten the answer, and so said to the Prof. with much feeling: " Professor, let by-gones be by-gones." But he didn't.

Prof. Ford, the elocutionist of Wilmington gave an entertainment in the Oratory on Monday evening, February 11 to a discouragingly small but quite appreciative audience, notwithstanding the antiquity of some of his selections. The en-

gagement was for the benefit of the Adelphic Literary Society of Newark Academy.

A Prof. in the course of a few remarks upon beginning a new study in a certain class said: " A man, while he should have a broad, general knowledge, should always have a specialty, or in other words, be '*homo unius libri*,' i. e. a man of one book." Student in an undertone: " I am of that genus, professor, but it's a blank book."

A Professor in speaking to a class concerning the number of recitations they had, made the remark that the Junior class was " pressed more in the former part of the week than in the latter." Several of the co-eds began to twist in their seats and the situation became serious when an unsophisticated youth inquired: " Professor, does that apply to the young ladies?"

NO. 1.

REVIEW LECTURE COURSE.

MISS HELEN FOTTER.

MONDAY EVENING, MARCH 2ND, 1885.

GENERAL ADMISSION, 50 cents.

No extra charge for reserved seats.

It is not necessary for us to enumerate the merits of the above lady, as her reputation is world wide. She is the most attractive and talented lady in the Lyceum field. The REVIEW has taken considerable risk upon itself in engaging her, and it is to be hoped that this first effort will meet with the generous approval of the people of Newark and the surrounding country.

Old students of the college, who used to look out their back windows and have an unobstructed view of the green hills and flowing meadows along the creek road, would be quite surprised to see the change that has taken place in the sporting grounds and surroundings, which are now occupied by houses and factories and traversed by railroad tracks. Newark is not what it used to be.

Class of '87 held a class election on Feb. 10th. Robert E. DeMaranville was elected President; M. N. Cunningham, Vice President; L. Evans, secretary; and H. S. Johnson, Treasurer. Robbins, Collins, Johnson, Gray and Smith, who en-

is a characteristic joke going the rounds ge journals, which, however inappropriate epartment, the local editor would like to It is in effect as follows: President Arthur ring his son at Princeton was surrounded bwd of students and in the course of his e to their loud demands for a "speech," Now gentlemen, I entrust to your care ndship the dearest thing I have on earth," g to his son). Immediately a waggish in the crowd threw up his hat and shout- h:e: cheers for the *Thing*." Young Arthur's stu name still clings to him.

We feel obliged to give the following as an illustration of the utter disregard of the feelings of his fellow students, which prompted "Buck" to inflict such an execrable pun upon them in the Geometry class. He was sitting behind a post and out of reach of the all-penetrating eye of the professor, who fearing an occasional peep in the book on "Buck's" part requested him to change his seat that he might have his eye on him (quite an insinuation by the way). The suggestion evidently did not meet with "Buck's" approval, for he reluctantly changed his seat with the significant remark that he "came in the recitation to Le poste."

The class was dismissed.

When a student is mashed upon a fair damsel, he calls her—his bird, and she is termed so-and-so's bird. Now there is a certain student (whose name when spelled backwards is Nivin) who has found a bird indeed. This "bird" bears the name of that class of birds, which pick nearly all of the farmer's corn out of his fields in the Spring. In a dreamy way of a moon-light night Jack was heard to get off the following:

By jing!
She's the first bird of the Spring,
And a prettier one
Has never come
To my sad heart to sing.
The youth survives.

The following is a verbatim report of a dialogue that recently took place between a certain member of the Class of '86 and a relative Junior: "Say, Aunt A., did you ever hear Pat sing?" Aunt A.: "Who?" Junior: "Why Pat, the celebrated singer." Aunt A.: "Goodness gracious, Joe, you mean Patti!" Junior: "No, her name is Pat. Pattie is what they sometimes call her. They just put the 'tie' on as a kind of pet name, you know." This youth holds himself as an authority on theatricals. This same student was lately asked how he spent a certain evening in Philadelphia and replied that he "went to the opera and saw Shakespeare played." "What," exclaimed his interlocutor, "went to the *opera* and saw a play of Shakespeare? Well what play did you see?" "Shakespeare," was the laconic reply. "But which of his plays did you see?" "Oh, dog it I tell you I saw Shakespeare played; what more do you want to know?" We add for the information of anxious friends that Joe is still in existence "and there isn't a law to prevent it." P. S. We beg the pardon of the ardent admirer of John M. Clayton for inserting this confidential conversation in these columns but it is too good a joke to pass in silence.

—————
Deference is the most complete, most indirect, and the most elegant of all compliments.—Shenstone.

College Notes.

The campus at Cornell is to be lighted by electric light.

An American College is about to be established at Shanghai, China.

Wesleyan, Middletown, Connecticut has received a bequest of \$40,000.

A poem of 100 lines is required of each Senior before graduating at Trinity.

The University of Pennsylvania has organized a school of Biology, the first in America.

Prof. Agassiz's gift to Harvard during the last thirteen years amount to more than \$500,000.

The average age at which students enter American colleges is seventeen; a century ago it was fourteen.

Amherst is considering the advisability of making but one course in the college, viz. the Classical course.

At Yale there are over 700 live frogs in the basement of Peabody awaiting the tortures of the Junior biologists.

The students of Thiel College have recently purchased uniforms. The novelty will soon wear off. "We've been thar."

Three thousand dollars have been given to the Princeton Seminary for the support of students preparing for the missionary field.

Amherst will soon have the honor of possessing the finest gymnasium in the world. It costs with all its equipments the modest little sum of \$88,000.

The Freshmen of Cornell have published resolutions condemning cane-rushes and pledging themselves to do all they can to abolish them. They have the support of the Juniors in their action.

At Lafayette the students are required to attend three services on Sunday and prepare a biblical recitation for the next morning.—*Ex.* Notwithstanding these requisitions, we would judge from their Sunday cane-rushes, that they were not little angels.

Russia is said to be the only civilized nation, whose laws exclude women from a college course, i. e. they are not only opposed to co-education, (for which they deserve commendation,) but are opposed to the higher education of women (for which they deserve condemnation.)

Dean Burges says, "God has forsaken Oxford University since women have been admitted to its examinations." The same might be said of Delaware College. When we know that but 400 Freshmen entered Oxford this year to 900 at Cambridge, we are inclined to believe the Dean's statement.

Sporting Notes.

Last Fall Yale had over 100 tennis courts on its campus.

A. J. Wilson, noted as an English bicyclist, has ridden 6,344 miles in 291 days.

Polo will in all probability come into popularity at Harvard during the coming season.

In the English universities four-fifths of the students enter earnestly into athletic sports.

Leap-frog is becoming popular among the young ladies at Conference Academy, Dover, Del. Humph!

At a mass meeting of Princeton graduates, an advisory committee of graduates for the various sports was appointed.

The Varsity crew of Yale has begun rowing now that the foot-ball season is over. It will train until the June races.

The Yale nine is considerably crippled owing to the loss of six of its best players, and but three of last year's team are at college.

Trinity had a lively cane-rush lately in which the Freshmen were victorious, consequently they now carry canes without molestation.

The great annual race on the Thames, England, between the eights of Oxford and Cambridge will take place this season on March 28th.

A large mirror is suspended in the room of the Harvard crew. Each oarsman is thereby enabled to see for himself the faults pointed out by the coach.

The Massachusetts Bicycle Club of Boston boasts 170 members. The club's riding record for 1884 is 104,451 miles, against 62,600 miles for the previous season.

The growth of education and the money paid for it in this country are marvelous. Tuition at Harvard get from \$800 to \$1,200 and the trainer in Athletics gets \$2,000.

Athletes, professional trainers, hunters, mountaineers, all physically strong and perfect men habitually breathe through the nostrils. This is claimed to be the cause of their freedom from colds.

The new track of the University of Pennsylvania with all the necessary buildings, etc., is completed. It is an oval quarter mile cinder path, eighteen feet wide on the straight and fifteen on the remainder.

During the past foot-ball season Harvard won seven out of eleven games, and scored 278 points to their opponents, 115. This is the last record Harvard will make at foot-ball. At Harvard, football is "woodbined."

Gem*, says: "It contains several articles
would do very well if it was not for that
ord, 'Gem.'" We would request the *Re-
o* explain to us how the word "Gem" af-
he articles contained therein. We agree
the *Review* in regard to misnomer, but we
stly suggest to the *Philosophian Review* for
can its contents, then its name, then ponder.

have noticed that some of our exchanges
t see the value of editing an exchange col-
Is there any value in an exchange col-

Of course there is. No college paper is
fect that it has no faults. Not one has
n itself to be all that is desired in a paper,
being the case, is there not room for im-
ment? We can not always see our faults
ers see them; man is not so constituted;
being pointed out by others, we are able to
et them. There is a spirit among some of
exchange editors for petty warfare, a warfare
is kept up for spite. This is not only vulgar
at injurious to a paper. If the editor can-
dit his column without indulging in spite he
better retire. It is the same in journalism
it is in society,—i. e. no true gentleman will
ge in sarcasm at the expense of his neighbor.
or us, we think the ex-column is a benefit to
aper. Furthermore we would like to see
of the arguments that those few papers,
ex-column ones, have for thinking as they do.
ould be an exceeding pleasure to us, indeed,
ear from them.

portant to Ladies. The Ladies' Department
ELT the Druggist is the ONLY place in Wil-
ton where they can obtain Supporters, Truss-
braces, Syringes, Elastic Stockings and be-
ed upon by an experienced lady. Private en-
ce No. 1 West Sixth street.

Society Notes.

Special meetings are now a rarity.

Frank Collins, '88, has joined the Delta Phi.

Pestalozzi Hall has been handsomely papered.

Joint-debates are unknown at Delaware College.

The Pestalozzi realized considerable from the
Lockwood lecture.

The Athenæan has lately added a new set of
Dickens' Works to its library.

No mixed Societies in this co-educational in-
stitution. This is a flaw in the system.

Very little rivalry exists between the Delta Phi
and the Athenæan during this term of the year.

Delta Phi's membership is about the same as it
has been for the last four years. Its roll numbers
twenty-six.

Upon the opening of college this year, the
Athenæan Hall had been handsomely repared and
repaired generally.

The Athenæans will lose one, the Delta Phi
four, the Pestalozzi four members by the gradu-
ation of the class of '85.

The Delta Phi and Athenæan hold their regular
meetings on Saturday mornings, and the Pesta-
lozzi on Friday afternoons.

All Societies in college are secret. The myth-
ical goat and greasy pole are feared by all new
comers, the co-eds not excepted.

The Pestalozzi (young ladies' society) has at
present the largest membership since its organiza-
tion in '77. Its roll numbers nineteen.

The Delta Phi has been making valuable addi-
tions to its library. Among other works, a new
set of Dickens' Works and the entire edition of
the Standard Library, have been added. At Dela-
ware College, Dickens seems to be the favorite of
novelists.

The Delta Phi, at the beginning of next term,
will present to the public a play entitled : "Com-
rade," together with a farce entitled "Class Day,"
scene laid at Harvard. The cast as regards the
actors embraces some of the ablest dramatic talent
in college, and as regards the actresses, is unsur-
passed either in college or the town. The rendi-
tion of the play will in all probability accord with
the high reputation the Delta Phi's have acquired
for themselves, in presenting plays.

Book Reviews.

1. *COLLOQUIAL EXERCISES, and select German Reader for Schools and Colleges*, by WM. DEUTSCH; and

2. *PREPARATORY BOOK of German Prose* by HERMANN B. BOSEN. Ginn, Heath & Company, Boston.

These two books are a real addition to the helps we have for studying German, and the first can readily be used as the introduction to the second. The plan of Mr. Deutsch's little book is the most sensible of all those proposed by which to teach German colloquially. It throws some work upon the pupil also; and it is flexible enough to admit of a large variety in the hands of the instructor. But Professor Boisen's work is preferable whenever the purpose is, not to study German for mere colloquial, but for literary purposes, and to gain a wider vocabulary. The ready command over six or eight hundred words and the ability to frame simple and idiomatic sentences by which the speaker can convey ordinary daily thoughts and can express his needs, is not in any real sense a knowledge of the German language. It would poorly equip him to read and enjoy the works of the great writers in it. There is much more needed. The Grammar must be mastered; but meanwhile a stock of words must be gained also. This PREPARATORY BOOK is one of the best helps for this, in the earlier stages of the study of German. There is less wasted work, and less of friction, in using this than in using any other which we have hitherto met, and we have examined not a few.

HOMES AND LANDS OF DELAWARE. Issued by State Board of Immigration. Edited by Prof. Wesley Webb.

This pamphlet is without doubt the most complete and exhaustive report of the agricultural and industrial condition of the State of Delaware that has yet been written. Its object is to set before the immigrant the many inducements for settlement which Delaware affords.

Considerable attention is paid to the condition of the people, their intelligence as a class, the school system, the advanced state of agriculture and the crops, the fertility of the soil, the large industrial pursuits, &c.

Then beginning with the northernmost town of the State, is given the population, the condition and average price of land therein and thereabouts, its staple products, situation, industries, convenience to transportation, &c., of every city and town to the southern boundary.

The work is highly commendable and does no little credit to our Professor of Agriculture.

LATINE is ever one of the most welcome of our exchanges. Always full of interesting matter to

the student of Latin, it furnishes many hints and suggestions not readily obtainable otherwise, and gives much collateral information about authorities which should be consulted.

We have noted in earlier numbers several translations of modern poems into Latin. Prof. Gasson's version, in Horatian measure, of Milton's grand Hymn upon the Nativity is not as smooth as it is accurate. It could be wished that he had chosen some one of the measures Prudentius had used for his Christian Hymns, which could bear the mighty thoughts of the English poet far better than the Alcaics. They have not the needed dignity of rhythm for so stately and divine a subject.

But the stiffness, the halting, forced rhythm of the translation of the delicate ballad of The King of Thule from Faust, is unbearable. Elisions should be sparingly used, if indeed admitted at all, in modern Leonine verse. It is no easy thing to write smooth Latin rhymes, but it can be done. To pass over the Hymns of Adam of St. Victor as too high and noble to be quoted here, and to adduce secular instances, who does not recall Walter Mapes' famous lines?—

Mibi est propositum in tanta mori, etc.

To come down to our own times, Dr. Maginn, and later imitators, showed how readily it could be done. How admirably the accent and the easy flow expressed in—

Si Horatio Flacco, de hilari Baccho
Mos carmina e-set cantare,
Si Massica vina vocaret divina
Falernaque seiret potare.

To Messrs. McKnight and Morgan of the Philadelphia School of Phonography and Type Writing, 1338 Chestnut St., Phila., Pa.

920 POPLAR STREET, WILMINGTON, DEL.

"Gentlemen: When I commenced to take lessons in Phonography at your school, I was able to write 50 words per minute. At the present time, after taking two months' instruction, I am able to write 125 words per minute. Through your influence I am now holding a lucrative position."

JAMES DRABBLE.

After graduating at this College, our young men and women who intend entering business, should prepare for it by taking a course of business training in the Bryant and Stratton Philadelphia Business College. No pains are spared to maintain the high reputation of this institution for thorough and practical instruction, and careful attention to the interests of the pupils. Write to them for a circular, and when you are in Philadelphia call and pass a pleasant hour examining the College.

DELAWARE COLLEGE REVIEW.

❖ DELAWARE COLLEGE. ❖

FACULTY:

WILLIAM H. PURNELL, A. M., LL. D.,
PRESIDENT,

PROFESSOR OF MENTAL, MORAL, AND POLITICAL SCIENCE.

Rev. WILLIAM D. MACKEY, A. M., Ph. D.,
PROFESSOR OF ANCIENT LANGUAGES AND CLASSICAL LITERATURE.

THEODORE R. WOLF, M. A., Ph. D., (Heidelberg,)
PROFESSOR OF CHEMISTRY, AND SANITARY SCIENCE.

FREDERICK D. CHESTER, B. S.,
PROFESSOR OF GEOLOGY, MINERALOGY, AND CIVIL ENGINEERING.

Rev. ANGELO A. BENTON, M. A.,
PROFESSOR OF MATHEMATICS AND MODERN LANGUAGES.

WESLEY WEBB, B. S.,

PROFESSOR OF AGRICULTURE, ECOLOGY, PHYSICS, AND INSTRUCTOR IN MILITARY TACTICS.

his Institution offers three Courses of Study to Students :

Classical; the Scientific and Agricultural; and the Literary

studies in these several courses are carefully selected, and the instruction given is thorough. The CLASSICAL COURSE includes the study of both Latin and Greek, and also Inorganic Chemistry and the Higher Mathematics.

The SCIENTIFIC AND AGRICULTURAL COURSE requires Latin, and either German or French, but omits Greek, and includes the study of Chemistry, both Inorganic and Organic, and the Higher Mathematics.

The LITERARY COURSE requires Latin and French or German, and omits the Higher Mathematics and Organic Chemistry.

The science of Agriculture is taught in the Scientific Course, or may be pursued as a specialty. All the male students are required to take the Military drill.

A selection of any branches of study may be made by the student, with the consent of his parents or guardian.

The full courses necessary to graduation are four years in length; but applicants may be admitted to advanced classes at any time, provided they can sustain the required examinations.

Both sexes are admitted to the class-room; and young ladies can obtain suitable boarding places in town.

The expenses are remarkably moderate.

The College is situated at Newark, in one of the most beautiful and healthful sections of the State. Newark contains about fifteen hundred inhabitants, and possesses every convenience that roads, telegraphs and telephones can give. It is about one-half hour's ride from Wilmington, two hours from Philadelphia, and about the same time from Baltimore.

There is a Methodist, a Presbyterian, an Episcopal, and a Catholic church in the town, and the students or visitors can make their own choice. The College is non-sectarian.

If fuller information is desired, it can be obtained from the President.

—FOR HEATING—

TWO OR MORE ROOMS.

This Stove is supplied with our well-known ANTI-CLINKER GRATE, by which a perpetual fire can be kept going the entire Winter, without the necessity of dumping the grate and kindling a fresh fire. This Stove gives a bottom as well as a top view of the fire; with this improvement we can always see through the windows in the base, and tell when the fire requires raking.

Also, Spear's Improved OPEN GRATES, both raised fire and low down. Improved Backs and Jambs. Anti-Clinker COOKING RANGE.

Portable and Brick Cased Furnaces.

ALL KINDS OF HEATING STOVES.

All of these contain new features never before offered to the public. Send for Circulars with full description and Price List.

JAMES SPEAR, 1014 & 1016 Market St., Philadelphia.
