"Rapid advances in technology have triggered a social revolution which is threatening the historic values of individuality and liberty. During the next decade the nation must seek solutions to the dislocations created by strides in industry, communications, agriculture, medicine, education, and other expanding fields. Present inequities and pressures toward conformity must be resolved and the right of dissent preserved without creating chaos which would result in the destruction of curbs on man's baser motivations."

"The student will be confronted with a choice of two types of higher education. He may want to stay in an institution of training or he may want to go to a university of learning where he can develop his intellect. The type of students who come to the University of Delaware may very well determine whether this is an institution of training or an institution of learning."

"The artist works to create a unified whole. Repetition fortifies a concept; opposition produces a strong, bold harmony—sometimes so harsh that transition is necessary. Balance must be achieved—not formal and static but subtle and dynamic, holding dissimilar elements in equilibrium. Emphasis and subordination must be considered, bringing into focus significant elements. Thus, the artist creates a microcosm of a changing society."

"I believe that the university  
will strengthen programs in the  
humanities, emphasize  
teaching over research, and  
actively encourage student  
participation in areas presently  
reserved for faculty and  
administration."
