# Delaware Student Testing Program Performance Level 1 Study District Level Findings 

August 2006<br>Audrey J. Noble, Ph.D., Director<br>Ximena Uribe-Zarain, Educational Researcher

Delaware Education Research \& Development Center
University of Delaware
Newark, DE 19716

This study was made possible by the generous support of the Delaware State Board of Education.

## ExECUTIVE Summary

$\boldsymbol{\aleph}$ It appears that the longer students remain at Performance Level I, the less likely they will reach the state's expected level of achievement by high school. The majority of students who score PL1 in reading or math will remain at PL1 or PL2. This re-emphasizes the importance of early intervention to address the needs of the stat's most at-risk students.
$\propto 2$ Most of the "successful" districts are moving 25 to 30 percent of students from Performance Level 1 to Performance Level 3 during the elementary and middle school years. By high school, districts are only moving 7 to 10 percent of lowperforming (PL1) students to the standards in reading and mathematics.
$\propto$ Clear disparities exist in regards to the distribution of students at the PL1 level as compared to most districts' overall student populations according to race and income status. A small number of Delaware districts are reaching parity in this regard.
$\boldsymbol{\leftrightarrow}$ Some of the state's smaller school districts appear to be more successful at reaching parity than many of its larger districts.

## Description

The study was designed to examine the progress of Delaware's lowest performing students beginning with DSTP data gathered in its first administration in 1998 through 2005. Students' progress has been tracked by cohorts statewide and within district. By analyzing five cohorts, there will be at least three scenarios to explore within district and statewide change in the academic performance of PL1 students at the elementary, middle, and high school levels in both reading and mathematics.

The power of the findings is increased by combining cohorts so as to avoid characteristics that may be idiosyncratic to any single cohort of students. Three cohorts have been combined to examine both the elementary ( $3^{\text {td }}$ to $5^{\text {th }}$ grade) and the high school ( $8^{\text {th }}$ to $10^{\text {th }}$ grade) changes. Five cohorts have been combined for the middle school ( $5^{\text {th }}$ to $8^{\text {th }}$ grade) analyses. We paid specific attention to students who scored Performance Level 1 at the first time point within each grouping.

The total number of students included in the analyses is 24,404 . Only those students who had DSTP scores at each data point have been included. For example, in cohort 1, 3819 students had DSTP scores beginning in $3^{\text {rd }}$ grade in 1998 through $10^{\text {th }}$ grade in 2005.

## Cohorts

| Cohort | name | 3rd | 5th | 8th | 10th | N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 1998G3 | ‘98 | '00 | ‘03 | '05 | 3819 |
| 2 | 1998G5 |  | '98 | '01 | ‘03 | 4840 |
| 3 | 1999G3 | ‘99 | '01 | '04 |  | 5587 |
| 4 | 1999G5 |  | '99 | '02 | '04 | 4536 |
| 5 | 2000G3 | '00 | ${ }^{\prime} 02$ | '05 |  | 5622 |

This report supplements the July 2006 report, Delaware Student Testing Program Performance Level 1 StudyPreliminary Findings. The July 2006 report portrayed students' progress statewide by tracking multiple cohorts described above. This report examines the following questions:
$\propto \boldsymbol{R}$ To what degree have Delaware districts ${ }^{1}$ been able to improve the distributions of students in reading and mathematics at the elementary, middle, and high school levels?
$\propto \mathbf{~ H o w}$ do these distributions vary by students' race and socio-economic status?
$\boldsymbol{\leftrightarrow}$ How does the distribution of minority and low-income students who score at PL1 initially and remain below the standard reflect the general demographics of the district population?

[^0]This report illustrates the degree to which districts have been able to move students from Performance Level 1 to "meeting or exceeding" the standard (PL3, 4, or 5) on the Delaware State Testing Program (DSTP) in reading and mathematics. The district-level data are disaggregated by students' income status and race. For purposes of illustration, distribution changes are defined by the percentage of students moved from PL1 to PL3, 4, and 5 combined. Our interest is in what percentage of PL1 students reached the standard by the next assessment period. Tables that illustrate the distribution of performance levels for all groups within all districts by reading and math content area can be found in the appendix.

IMPORTANT NOTE: These analyses are not purely longitudinal. As one examines Table A below, it can be seen, for example, that Colonial had 1340 students within the three $3^{\text {rd }}$ grade cohorts who had DSTP reading scores. Of these students, 104 or $8 \%$ scored at PL1. The numbers in columns labeled "By $5^{\text {th }}$ Grade" represent those Colonial students within the 3 cohorts who took the $5^{\text {th }}$ grade DSTP and who had scored PL1 in grade 3. While this $5^{\text {th }}$ grade group includes many of the same students as the $3^{\text {rd }}$ grade group, there may be some other students included/excluded due to mobility (i.e., some students leaving and some entering the district between $3^{\text {rd }}$ and $5^{\text {th }}$ grade). Consequently, in an effort to recognize that districts are responsible for all students tested, regardless of whether they were there for the full time period between assessments, we chose this method of analysis and presentation. Also, in many cases the actual number of students ( n ) that represent the percentage is very small. In this case, one should be very careful in making judgments or comparisons. Notice that " $n$ 's" that follow the school district name represent the number of students in the district in the first testing point.

## Reading

Table A. District-Level Distribution of $3{ }^{\text {rd }}$ Grade DSTP Reading Performance Level by $5^{\text {th }}$ Grade

|  | Percentage of Students at |  | Grade |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| Appoquinimink ( $\mathrm{n}=720$ ) | 7\% (52) | 36\% (20) | 33\% (18) |
| Colonial ( $\mathrm{n}=1340$ ) | 8\% (104) | 30\% (31) | 30\% (31) |
| Indian River ( $\mathrm{n}=1041$ ) | 3\% (32) | 24\% (7) | 28\% (8) |
| Lowest Percentages |  |  |  |
| Capital ( $\mathrm{n}=898$ ) | 8\% (65) | 52\% (32) | 16\% (10) |
| Cape Henlopen ( $\mathrm{n}=646$ ) | 6\% (39) | 60\% (24) | 15\% (6) |
| Woodbridge ( $\mathrm{n}=268$ ) | 8\% (21) | 55\% (11) | 15\% (3) |
| RANGE | 2\% to 12\% | 19\% to 60\% | 15\% to 33\% |

Table A illustrates findings from the three (3) cohorts where we were able to track the progress of students who scored PL1 in $3^{\text {rd }}$ grade reading. For example, it shows that in the Appoquinimink School District, $7 \%$ of its $3^{\text {rd }}$ graders from the 3 combined cohorts scored at PL1 in reading. When

University of Delaware Education Research and Development Center
looking at Appoquinimink's $5^{\text {th }}$ grade students, of those who had scored PL1 in grade 3, some $33 \%$ of them had met or exceeded the reading standard. However, $36 \%$ of $5^{\text {th }}$ graders who had PL1 in grade 3 remained at PL1 in grade 5. While Appoquinimink, Colonial, and Indian River are on the higher end of this spectrum, Capital, Cape Henlopen, and Woodbridge are on the lower end. It is important to recognize that we used percentages for comparison purposes but the actual number that this percentage represents ( n ) is also important to consider.

RANGE: Following each table is a range that illustrates the combined range of all districts' data. As can be seen in Table B below, for the combined $5^{\text {th }}$ grade cohorts, across the districts assessing $5^{\text {th }}$ grade students, $5 \%$ to $13 \%$ of students scored at PL1. Across districts, by $8^{\text {th }}$ grade, of those $8^{\text {h }}$ grade students who scored PL1 in $5^{\text {th }}$ grade reading, $14 \%$ to $54 \%$ of them again scored PL1; while, $0 \%$ to $52 \%$ of them scored at levels 3 , 4 , or 5 .

Table B. District-Level Distribution of $5^{\text {th }}$ Grade DSTP Reading Performance Level by $8^{\text {th }}$ Grade

|  | Percentage of Students at |  | Grade |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| Laurel ( $\mathrm{n}=509$ ) | 13\% (65) | 19\% (11) | 52\% (30) |
| Smyrna ( $\mathrm{n}=858$ ) | 7\% (45) | 26\% (7) | 30\% (13) |
| Caesar Rodney ( $\mathrm{n}=1372$ ) | 7\% (90) | 25\% (20) | 29\% (23) |
| Lowest Percentages |  |  |  |
| Seaford ( $\mathrm{n}=733$ ) | 13\% (94) | 50\% (38) | 16\% (12) |
| Woodbridge ( $\mathrm{n}=420$ ) | 9\% (38) | 38\% (17) | 11\% (5) |
| RANGE | 5\% to 13\% | 14\% to 54\% | 0\% to 52\% |

In the $5^{\text {th }}$ to $8^{\text {th }}$ grade analyses, Laurel had $13 \%$ of its $5^{\text {th }}$ grade students scoring at performance level 1. Of their $8^{\text {th }}$ grade students who had scored PL1 in reading in $5^{\text {th }}$ grade, $52 \%$ of them reached levels 3,4 , or 5 on the $8^{\text {th }}$ grade DSTP reading.

Table C. District-Level Distribution of $8^{\text {th }}$ Grade DSTP Reading Performance Level by $10^{\text {th }}$ Grade

|  | Percentage of <br> Students at <br> PL1 in 8 <br> Grade | By 10 ${ }^{\text {th }}$ Grade |  |
| :--- | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds <br> PL3,4, or 5 |
| Highest Percentages |  |  |  |
| Smyrna (n=471) | $\mathbf{4 \% ( 1 8 )}$ | $73 \%(11)$ | $7 \%(1)$ |
| Lake Forest (n=470) | $\mathbf{8 \% ( 3 9 )}$ | $89 \%(31)$ | $6 \%(2)$ |
| Capital (n=795) | $\mathbf{8 \% ( 6 3 )}$ | $83 \%(44)$ | $6 \%(3)$ |
| RANGE | $\mathbf{3 \%}$ to 10\% | $\mathbf{7 3} \%$ to 100\% | $\mathbf{0 \%}$ to 7\% |

Progress of students between $8^{\text {th }}$ and $10^{\text {th }}$ grade was very minimal and the number of students was quite small. Three to ten percent of the districts' students were scoring at performance level 1 in grade 8 reading. Of the $10^{\text {th }}$ grade students who scored PL1 in grade 8,73 to 100 percent of them again scored at PL1. It is important to recognize that what is not accounted for in these middle to high school analyses is the number of students who dropped out of school between these two testing periods.

## Mathematics

Table D. District-Level Distribution of $3^{\text {rd }}$ Grade DSTP Math Performance Level by $5^{\text {th }}$ Grade

|  | Percentage of <br> Students at <br> PL1 in 3 |
| :--- | :---: | :---: | :---: | :---: |
| (d) Grade |  |$\quad$ By 5 ${ }^{\text {th }}$ Grade

Table D shows that Colonial School District had $11 \%$ of its students from the three cohorts scoring PL1 in $3^{\text {rd }}$ grade mathematics. Of those $5^{\text {th }}$ grade Colonial students who scored PL1 in $3^{\text {rd }}$ grade, $30 \%$ had reached or exceeded the math standard. In Seaford and Laurel, only 4\% reached those levels.

Table E. District-Level Distribution of $5^{\text {th }}$ Grade DSTP Math Performance Level by $8^{\text {th }}$ Grade

|  | Percentage of Students at |  | Grade |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| Laurel ( $\mathrm{n}=522$ ) | 19\% (97) | 54\% (54) | 25\% (26) |
| Brandywine ( $\mathrm{n}=2442$ ) | 11\% (264) | 60\% (158) | 12\% (32) |
| Cape Henlopen ( $\mathrm{n}=1116$ ) | 12\% (132) | 65\% (80) | 11\% (14) |
| Lowest Percentages |  |  |  |
| Woodbridge ( $\mathrm{n}=430$ ) | 10\% (43) | 7\% (40) | 2\% (1) |
| Capital ( $\mathrm{n}=1489$ ) | 16\% (235) | 82\% (174) | 2\% (5) |
| RANGE | 8\% to 19\% | 54\% to 82\% | 0\% to 25\% |

Table E above shows that the Laurel School District had $19 \%$ of its students from the five combined cohorts scoring PL1 in $5^{\text {th }}$ grade mathematics. Of those $8^{\text {th }}$ grade Laurel students who scored PL1 in $5^{\text {th }}$ grade, $25 \%$ had reached or exceeded the math standard. In Woodbridge and Capital, only $2 \%$ reached those levels.

Table F. District-Level Distribution of $8^{\text {th }}$ Grade DSTP Math Performance Level by $10^{\text {th }}$ Grade

|  | Percentage of Students at |  | Grade |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| NCCVT (no $8^{\text {th }}$ grade) |  | 70\% (130) | 11\% (20) |
| POLYTECH (no $8^{\text {th }}$ grade) |  | 69\% (47) | 10\% (7) |
| Lowest Percentages |  |  |  |
| Colonial ( $\mathrm{n}=1189$ ) | 15\% (183) | 83\% (131) | 1\% (1) |
| Lake Forest ( $\mathrm{n}=470$ ) | 14\% (66) | 91\% (49) | 0\% (0) |
| RANGE | 11\% to 23\% | 33\% to 91\% | 0\% to 11\% |

## Low Income <br> Reading

The following tables illustrate the DSTP reading performance level distribution changes among students from low income families in Delaware districts.

Table G. District-Level Distribution of $3^{\text {rd }}$ Grade Low Income Students' DSTP Reading Performance Level by $5^{\text {th }}$ Grade

|  | Percentage of Students at |  | Grade |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| Appoquinimink (n=94) | 15\% (14) | 38\% (6) | 38\% (6) |
| Smyrna ( $\mathrm{n}=137$ ) | 4\% (5) | 14\% (1) | 29\% (2) |
| Colonial ( $\mathrm{n}=577$ ) | 10\% (59) | 40\% (24) | 25\% (15) |
| Lowest Percentages |  |  |  |
| Laurel ( $\mathrm{n}=133$ ) | 13\% (17) | 38\% (5) | 8\% (1) |
| Caesar Rodney ( $\mathrm{n}=288$ ) | 13\% (37) | 46\% (17) | 8\% (3) |
| Cape Henlopen ( $\mathrm{n}=262$ ) | 10\% (27) | 63\% (17) | 7\% (2) |
| RANGE | 5\% to 21\% | 14\% to 63\% | 7\% to 38\% |

Table G illustrates that of the three cohorts examined across all districts, 5 to 21 percent of students from low-income families scored PL1 in $3^{\text {rd }}$ grade reading. Small " $n$ ' $s$ " are particularly important to watch when examining the percentages in these analyses.

Table H. District-Level Distribution of $5^{\text {th }}$ Grade Low Income Students' DSTP Reading Performance Level by $8^{\text {th }}$ Grade

|  | Percentage of Students at |  | Grade |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| Laurel ( $\mathrm{n}=217$ ) | 18\% (40) | 24\% (8) | 47\% (16) |
| Smyrna ( $\mathrm{n}=242$ ) | 7\% (18) | 20\% (4) | 35\% (7) |
| Cape Henlopen ( $\mathrm{n}=442$ ) | 20\% (89) | 30\% (24) | 22\% (17) |
| Lowest Percentages |  |  |  |
| Capital ( $\mathrm{n}=615$ ) | 20\% (122) | 40\% (45) | 12\% (13) |
| Seaford ( $\mathrm{n}=374$ ) | 21\% (80) | 58\% (37) | 8\% (5) |
| Woodbridge ( $\mathrm{n}=200$ ) | 14\% (27) | 44\% (15) | 3\% (1) |
| RANGE | 7\% to 23\% | 20\% to 58\% | 3\% to 47\% |

Table $H$ above illustrates the number of low-income students considered in the $5^{\text {th }}$ to $8^{\text {th }}$ grade distributions is somewhat larger than the previous table since five cohorts were examined for this analysis. Laurel had $18 \%$ of its low-income students score PL1 in $5^{\text {th }}$ grade reading. Of those $8^{\text {th }}$ grade Laurel students who had PL1 in $5^{\text {th }}$ grade, $47 \%$ of them met or exceeded the $8^{\text {th }}$ grade reading standard.

Table I. District-Level Distribution of $8^{\text {th }}$ Grade Low Income Students' DSTP Reading Performance Level by $10^{\text {th }}$ Grade

|  | Percentage of Students at |  | Grade |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| Smyrna ( $\mathrm{n}=136$ ) | 7\% (10) | 73\% (8) | 9\% (1) |
| Capital (n=125) | 16\% (20) | 89\% (17) | 5\% (1) |
| RANGE | 7\% to 18\% | 73\% to 100\% | 0\% to 9\% |

Again small " $n$ 's" are very problematic in this analysis. However, it does appear that of those lowincome $10^{\text {th }}$ grade students who scored at PL1 in $8^{\text {th }}$ grade reading, most $(73 \%-100 \%)$ stayed at that level in $10^{\text {th }}$ grade.

## Mathematics

Table J. District-Level Distribution of $3^{\text {rd }}$ Grade Low Income Students' DSTP Math Performance Level by $5^{\text {th }}$ Grade

|  | Percentage of Students at |  | Grade |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| Colonial ( $\mathrm{n}=600$ ) | 14\% (85) | 42\% (41) | 23\% (23) |
| Appoquinimink ( $\mathrm{n}=111$ ) | 26\% (29) | 64\% (18) | 21\% (6) |
| Lake Forest ( $\mathrm{n}=230$ ) | 15\% (35) | 63\% (22) | 17\% (6) |
| Lowest Percentages |  |  |  |
| Capital ( $\mathrm{n}=418$ ) | 14\% (57) | 69\% (43) | 5\% (3) |
| Seaford ( $\mathrm{n}=253$ ) | 16\% (40) | 72\% (33) | 4\% (2) |
| Laurel ( $\mathrm{n}=148$ ) | 28\% (41) | 76\% (26) | 3\% (1) |
| RANGE | 6\% to 29\% | 39\% to 76\% | 3\% to 23\% |

Table J shows that Colonial School District had $14 \%$ of its low-income students from the three cohorts scoring PL1 in $3^{\text {rd }}$ grade mathematics. Of those low-income $5^{\text {th }}$ grade Colonial students who scored PL1 in $3^{\text {rd }}$ grade, $23 \%$ had reached or exceeded the math standard. Again, small " $n$ 's" are problematic when examining other districts with the distribution changes.

Table K. District-Level Distribution of $5^{\text {th }}$ Grade Low Income Students' DSTP Math Performance Level by $8^{\text {th }}$ Grade

|  | Percentage of Students at | By $8^{\text {th }}$ Grade |  |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| Laurel (n=226) | 27\% (62) | 58\% (38) | 24\% (16) |
| Brandywine ( $\mathrm{n}=736$ ) | 25\% (187) | 63\% (121) | 10\% (20) |
| Lowest Percentages |  |  |  |
| Capital ( $\mathrm{n}=663$ ) | 24\% (155) | 83\% (118) | 1\% (1) |
| Seaford ( $\mathrm{n}=390$ ) | 27\% (106) | 87\% (81) | 1\% (1) |
| Smyrna(n=255) | 13\% (34) | 83\% (38) | 2\% (1) |
| Christina ( $\mathrm{n}=1608$ ) | 27\% (438) | 78\% (315) | 2\% (10) |
| RANGE | 13\% to 27\% | 58\% to 87\% | 1\% to $24 \%$ |

Table K shows that the Laurel School District had $27 \%$ of its low-income students scoring PL1 in $5^{\text {th }}$ grade mathematics. Of those low-income $8^{\text {th }}$ grade Laurel students who had PL1 in $5^{\text {th }}$ grade, $24 \%$ met or exceeded the $8^{\text {th }}$ grade math standard. Across the districts, 13 to 27 percent of $5^{\text {th }}$ grade low-income students scored PL1 in mathematics. By $8^{\text {th }}$ grade, of those who scored PL1 in $5^{\text {th }}$ grade, 58 to 87 percent of low-income students continued to score at the lowest DSTP level in mathematics.

Table L. District-Level Distribution of $8^{\text {th }}$ Grade Low Income Students' DSTP Math Performance Level by $10^{\text {th }}$ Grade

|  | Percentage of <br> Students at <br> PL1 in 8 <br> Grade | By 10 ${ }^{\text {th }}$ Grade |  |
| :--- | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds <br> PL3,4, or 5 |
| Highest Percentages |  |  |  |
| POLYTECH (no 8 ${ }^{\text {th }}$ grade) |  | $71 \%(20)$ | $14 \%(4)$ |
| NCCVT (no 8 ${ }^{\text {th }}$ grade) |  | $73 \%(79)$ | $9 \%(10)$ |
| Appoquinimink (n=128) | $\mathbf{2 0} \% \mathbf{( 2 5 )}$ | $74 \%(29)$ | $9 \%(4)$ |
| Smyrna (n=148) | $\mathbf{3 0} \% \mathbf{( 4 4 )}$ | $62 \%(17)$ | $9 \%(2)$ |
| RANGE | $\mathbf{1 5 \%} \%$ to 43\% | $\mathbf{6 2 \%} \%$ to $\mathbf{9 3} \%$ | $\mathbf{0} \%$ to $\mathbf{1 4 \%}$ |

Changes in distributions between $8^{\text {th }}$ and $10^{\text {th }}$ grade in mathematics of low performing students from low-income families again is minimal. Districts are having very limited success in moving student achievement to expected levels of those students scoring at the lowest performance level.

## Minority ${ }^{2}$ <br> READING

The following tables illustrate the DSTP reading performance level distribution changes among minority students in Delaware districts.

Table M. District-Level Distribution of $3^{\text {rd }}$ Grade Minority Students' DSTP Reading Performance Level by $5^{\text {th }}$ Grade

|  | Percentage of Students at | By $5^{\text {th }}$ Grade |  |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| Woodbridge ( $\mathrm{n}=83$ ) | 14\% (12) | 55\% (6) | 27\% (3) |
| Colonial ( $\mathrm{n}=534$ ) | 11\% (60) | 41\% (24) | 21\% (12) |
| Milford ( $\mathrm{n}=147$ ) | 15\% (22) | 46\% (11) | 17\% (4) |
| Brandyine (n=468) | 12\% (56) | 63\% (33) | 17\% (9) |
| Lowest Percentages |  |  |  |
| Caesar Rodney | 11\% (22) | 57\% (13) | 9\% (2) |
| Laurel ( $\mathrm{n}=52$ ) | 25\% (13) | 36\% (4) | 9\% (1) |
| Lake Forest ( $\mathrm{n}=88$ ) | 17\% (15) | 47\% (7) | 7\% (1) |
| Smyrna ( $\mathrm{n}=56$ ) | 2\% (1) | 50\% (1) | 0\% (0) |
| RANGE | 7\% to 25\% | 36\% to 60\% | 0\% to 27\% |

Table M shows that Colonial had $11 \%$ of its minority students from the three cohorts scoring PL1 in $3^{\text {rd }}$ grade reading. Of those $5^{\text {th }}$ grade Colonial minority students who scored PL1 in $3^{\text {rd }}$ grade, $21 \% \mathrm{had}$ reached or exceeded the reading standard. Again, small "n's" are problematic when examining the districts with the distribution changes in this table.

[^1]Table N. District-Level Distribution of $5^{\text {th }}$ Grade Minority Students' DSTP Reading Performance Level by $8^{\text {th }}$ Grade

|  | Percentage of Students at |  | Grade |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| Smyrna (n=102) | 12\% (12) | 17\% (2) | 50\% (6) |
| Laurel ( $\mathrm{n}=98$ ) | 23\% (23) | 20\% (4) | 45\% (9) |
| Colonial ( $\mathrm{n}=848$ ) | 14\% (122) | 30\% (39) | 28\% (36) |
| Lowest Percentages |  |  |  |
| Seaford ( $\mathrm{n}=258$ ) | 23\% (60) | 54\% (28) | 12\% (6) |
| Caesar Rodney ( $\mathrm{n}=330$ ) | 11\% (37) | 43\% (12) | 11\% (3) |
| Woodbridge ( $\mathrm{n}=116$ ) | 18\% (21) | 46\% (12) | 8\% (2) |
| RANGE | 11\% to 25\% | 17\% to 68\% | 8\% to 50\% |

Table N shows that the Smyrna School District had $12 \%$ of its minority students scoring PL1 in $5^{\text {th }}$ grade reading. Of those low-income $8^{\text {th }}$ grade Smyrna students who had PL1 in $5^{\text {th }}$ grade, $50 \%$ met or exceeded the $8^{\text {th }}$ grade math standard. Laurel also demonstrated similar progress. Colonial with a higher number of minority students scoring at the PL1 level, had $28 \%$ of them meeting or exceeding the reading standard by $8^{\text {th }}$ grade.

Table O. District-Level Distribution of $8^{\text {th }}$ Grade Minority Students' DSTP Reading Performance Level by $10^{\text {th }}$ Grade

|  | Percentage of <br> Students at <br> PL1 in 8 |
| :--- | :---: | :---: | :---: |
| Grade |  |$\quad$| By 10 ${ }^{\text {th }}$ Grade |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Histrict |  |  |  | PL1 |  |  | Meets or Exceeds <br> PL3,4, or 5 |
| Hest Percentages |  |  |  |  |  |  |  |
| Smyrna (n=54) |  |  |  |  |  |  |  |
| Appoquinimink (n=84) |  |  |  |  |  |  |  |
| Capital (n=344) |  |  |  |  |  |  |  |
| RANGE |  |  |  |  |  |  |  |

Table O illustrates the very limited number of low-performing minority students who move from PL1 to PL3 or better between $8^{\text {th }}$ and $10^{\text {th }}$ grade in reading.

## Mathematics

Table P. District-Level Distribution of $3^{\text {rd }}$ Grade Minority Students' DSTP Math Performance Level by $5^{\text {th }}$ Grade

|  | Percentage of Students at |  | Grade |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| Colonial ( $\mathrm{n}=547$ ) | 17\% (92) | 43\% (43) | 20\% (20) |
| Caesar Rodney ( $\mathrm{n}=208$ ) | 19\% (36) | 48\% (16) | 15\% (5) |
| Appoquinimink (n=68) | 34\% (23) | 57\% (12) | 14\% (3) |
| Lowest Percentages |  |  |  |
| Laurel ( $\mathrm{n}=55$ ) | 36\% (20) | 88\% (14) | 0\% (0) |
| Smyrna ( $\mathrm{n}=60$ ) | 7\% (4) | 75\% (6) | 0\% (0) |
| Seaford ( $\mathrm{n}=175$ ) | 19\% (34) | 74\% (29) | 0\% (0) |
| RANGE | 7\% to 36\% | $33 \%$ to $88 \%$ | 0\% to 20\% |

Table P shows that Colonial School District had $17 \%$ of its minority students from the three cohorts scoring PL1 in $3^{\text {rd }}$ grade mathematics. Of those $5^{\text {th }}$ grade Colonial minority students who scored PL1 on the $3^{\text {rd }}$ grade DSTP, twenty percent ( $20 \%$ ) had reached or exceeded the math standard. Again, small " $n$ 's" are problematic when examining the other distribution changes.

Table Q. District-Level Distribution of $5^{\text {th }}$ Grade Minority Students' DSTP Math Performance Level by $8^{\text {th }}$ Grade

Table Q above shows that the Laurel School District had $38 \%$ of its minority students scoring PL1 in $5^{\text {th }}$ grade math. Of those $8^{\text {th }}$ grade Laurel minority students who had PL1 in $5^{\text {th }}$ grade, $20 \%$ met or exceeded the $8^{\text {th }}$ grade math standard. Across districts, of the 5 cohorts examined, 17 to 38 percent of $5^{\text {th }}$ grade minority students scored PL1 in mathematics. Of those $8^{\text {th }}$ grade minority students who scored PL1 in $5^{\text {th }}$ grade, 61 to 100 percent of them scored PL1 again in $8^{\text {th }}$ grade.

Table R. District-Level Distribution of $8^{\text {th }}$ Grade DSTP Math Performance Level by $10^{\text {th }}$ Grade

|  | Percentage of Students at |  | Grade |
| :---: | :---: | :---: | :---: |
| District |  | PL1 | Meets or Exceeds PL3,4, or 5 |
| Highest Percentages |  |  |  |
| POLYTECH |  | 65\% (13) | 20\% (4) |
| Smyrna ( $\mathrm{n}=60$ ) | 45\% (27) | 61\% (19) | 6\% (2) |
| Appoquinimink ( $\mathrm{n}=85$ ) | 24\% (20) | 83\% (15) | 6\% (1) |
| Lowest Percentages |  |  |  |
| Lake Forest ( $\mathrm{n}=83$ ) | 29\% (24) | 95\% (21) | 0\% (0) |
| Colonial ( $\mathrm{n}=454$ ) | 22\% (102) | 83\% (85) | 0\% (0) |
| Brandywine ( $\mathrm{n}=370$ ) | 29\% (108) | 92\% (82) | 1\% (1) |
| RANGE | 16\% to 47\% | 61\% to 95\% | 0\% to 20\% |

University of Delaware Education Research and Development Center

The above table illustrates again the limited progress, besides POLYTECH, being made in improving the achievement levels of $8^{\text {th }}$ grade minority students from PL1 to meeting of exceeding the math standard by $10^{\text {th }}$ grade.

## Issues of Parity

After having examined the cohort and district data as portrayed thus far, the authors chose to examine the data from the perspective of parity. We believe that it was important to look at whether the distribution of students at the PL1 level reflect the district as a whole. In other words, parity exists when a district enrollment is $45 \%$ minority and $45 \%$ of the PL1 students are minority students. We also recognized that some information was being lost about the progress of PL1 students when we only looked at how many of them reached or exceeded the standard. Consequently, we decided to examine this question:
$\propto$ How does the distribution of minority and low-income students who score at PL1 initially and remain below the standard reflect the general demographics of the district population?

Tables U and V portray the data of all 19 Delaware school districts. Here, as in the prior analyses, we chose not to include the charter schools because of the lack of data within the cohorts examined and/or the lack of data between two data points.

To interpret these tables, one should consider the following Caesar Rodney example.

## RACE

$\propto$ District-wide: From the most current DOE District Profile data, it was found that the racial population of the Caesar Rodney School District included $68 \%$ non-minority (Asian and white) and $32 \%$ minority (African American, Hispanic, and American Indian) students.
@ $3^{\text {rd }}$ to $5^{\text {th }}$ : From all the cohorts examined, of the Caesar Rodney $5^{\text {th }}$ grade students who scored PL1 in $3^{\text {rd }}$ grade reading, of those who remained below the standard (PL1 +PL2) on the $5^{\text {th }}$ grade DSTP, $55 \%$ were non-minority and $45 \%$ were minority students.
© $5^{\text {th }}$ to $8^{\text {th }}$ : From all the cohorts examined, of the Caesar Rodney $8^{\text {th }}$ grade students who scored PL1 in $5^{\text {th }}$ grade reading, of those who remained below the standard (PL1 +PL2) on the $8^{\text {th }}$ grade DSTP, $55 \%$ were non-minority and $45 \%$ were minority students.
$\propto 8^{\text {th }}$ to $10^{\text {th }}$ : From all the cohorts examined, of the Caesar Rodney $10^{\text {th }}$ grade students who scored PL1 in $8^{\text {th }}$ grade reading, of those who remained below the standard (PL1 +PL2) on the $5^{\text {th }}$ grade DSTP, $54 \%$ were non-minority and $46 \%$ were minority students.

One can see that the ratio of non-minority to minority students across all three analyses remains constant (i.e., 55:45, 55:45, and 54:46). However, these ratios are somewhat different from the district-wide demographic ratio of 68:32.
@ District-wide: From the most current DOE District Profile data, it was found that the population of the Caesar Rodney School District in regards to income status included 70\% nonlow income students and $30 \%$ low-income students.
$@ 3^{\text {rd }}$ to $5^{\text {th }}$ : From all the cohorts examined, of the Caesar Rodney $5^{\text {th }}$ grade students who scored PL1 in $3^{\text {rd }}$ grade reading, of those who remained below the standard (PL1 +PL2) on the $5^{\text {th }}$ grade DSTP, $28 \%$ were non-low income and $72 \%$ were from low-income families.
@ $5^{\text {th }}$ to $8^{\text {th. }}$ : From all the cohorts examined, of the Caesar Rodney $8^{\text {th }}$ grade students who scored PL1 in $5^{\text {th }}$ grade reading, of those who remained below the standard (PL1 + PL2) on the $8^{\text {th }}$ grade DSTP, $39 \%$ were non-low income and $61 \%$ were from low-income families
$\propto 8^{\text {th }}$ to $10^{\text {th }}$ : From all the cohorts examined, of the Caesar Rodney $10^{\text {th }}$ grade students who scored PL1 in $8^{\text {th }}$ grade reading, of those who remained below the standard (PL1 +PL2) on the $5^{\text {th }}$ grade DSTP, $31 \%$ were non-low income and $69 \%$ were from low-income families

In these analyses of income status data, lack of parity is clearly evident. While the district-wide demographic ratio is 70:30 (non-low-income to low-income), the achievement measures are almost the inverse.

Some districts appear to be reaching or achieving parity in regards to the performance of their minority and/or low-income students.

Table S. Examples of Districts Approaching Parity

| District Name | Group | Population Ratio | $3^{\text {rd }}$ to $5^{\text {th }}$ | $5^{\text {th }}$ to $8^{\text {th }}$ | $8^{\text {th }}$ to $10^{\text {th }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Reading |  |  |  |  |  |
| Smyrna | Non-minority: Minority | 80:20 | 83:17 | 80:20 | 79:21 |
| Appoquinimink | Non-minority: Minority | 78:22 | 78:22 | 67:33 | 68:33 |
| Woodbridge | Non-minority: Minority | 55:45 | 53:47 | 40:60 | 47:53 |
| Appoquinimink | Non-low income: Low Income | 87:13 | 73:27 | 71:29 | 73:28 |
| Laurel | Non-low income: Low Income | 49:51 | 37:63 | 36:64 | 33:67 |
| Mathematics |  |  |  |  |  |
| Smyrna | Non-minority: Minority | 80:20 | 89:11 | 69:31 | 73:27 |
| Appoquinimink | Non-minority: Minority | 78:22 | 85:15 | 70:30 | 68:33 |
| Laurel | Non-low income: Low Income | 49:51 | 39:91 | 37:63 | 33:67 |

Table T. Examples of Districts Demonstrating Lack of Parity

| District Name | Group | Population Ratio | $3^{\text {rd }}$ to $5^{\text {th }}$ | $5^{\text {th }}$ to $8^{\text {th }}$ | $8^{\text {th }}$ to $10{ }^{\text {th }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Reading |  |  |  |  |  |
| Milford | Non-minority: Minority | 63:37 | 35:65 | 42:58 | 41:59 |
| Cape Henlopen | Non-minority: Minority | 73:27 | 50:50 | 48:52 | 49:51 |
| Brandywine | Non-minority: Minority | 59:41 | 26:74 | 26:74 | 30:70 |
| Seaford | Non-low income: Low Income | 46:54 | 18:82 | 8:92 | 8:92 |
| Red Clay | Non-low income: Low Income | 62:38 | 31:69 | 29:71 | 22:78 |
| Mathematics |  |  |  |  |  |
| Red Clay | Non-minority: Minority | 53:47 | 29:71 | 35:65 | 28:72 |
| Christina | Non-low income: Low Income | 57:43 | 27:73 | 35:65 | 31:69 |
| Seaford | Non-low income: Low Income | 46:54 | 15:85 | 15:85 | 12:88 |
