College of Agriculture

One of the strongest undergraduate agricultural programs in the East, the College of Agriculture prepares students to enter any aspect of this diverse and challenging field. It offers programs ranging from agricultural engineering technology to plant and animal science and entomology. Concentration may also be arranged in wildlife conservation, landscape horticulture, or pre-veterinary instruction.

Agriculture is an important scientific discipline and its fundamental aim is to discover more efficient and economical means of producing food for a world with a growing population and dwindling natural resources. The objective of the College of Agriculture is to prepare students for a variety of career opportunities in individual enterprise, teaching, and public service. By providing a flexible program of study, the curriculum is designed to keep students up to date on the changes and improvements taking place in the agricultural industry. Because research continues to lie at the heart of agriculture, students are given opportunities to participate in scientific research. Faculty research is closely linked with the undergraduate teaching program. Ag students also have access to special on-campus facilities, such as a 400-acre experimental farm and Holstein and Guernsey dairy herds.

The Agriculture Science program also stresses the importance of social activities. Many clubs and organizations are available to students as well as the farmhouse and Alpha Zeta, a coed honors fraternity. Every spring the college organizes "Ag Day" which is sponsored by the university.

The need for agricultural jobs will continue to grow as technological advances increase the need for college-trained personnel.

## **Dean Gouldner**

College of Arts and Science

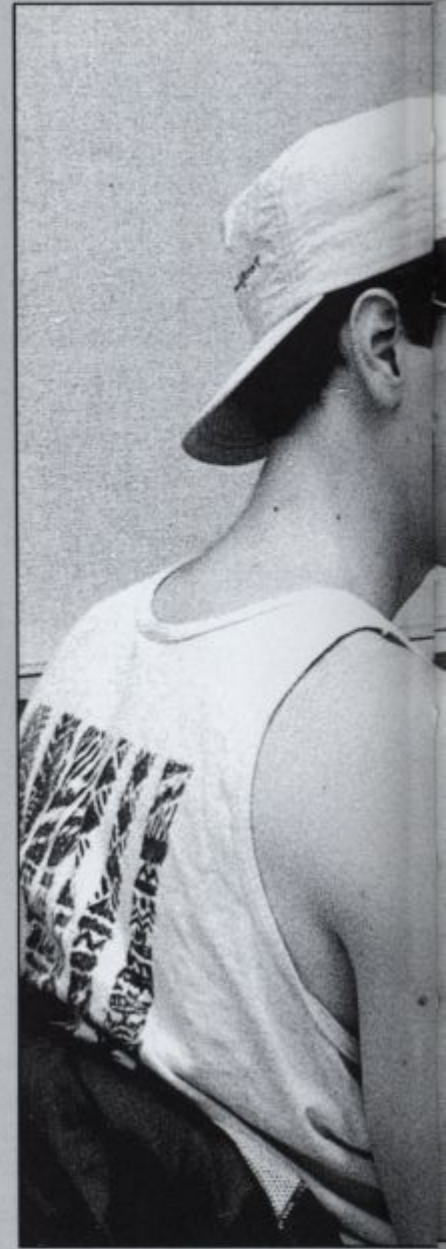

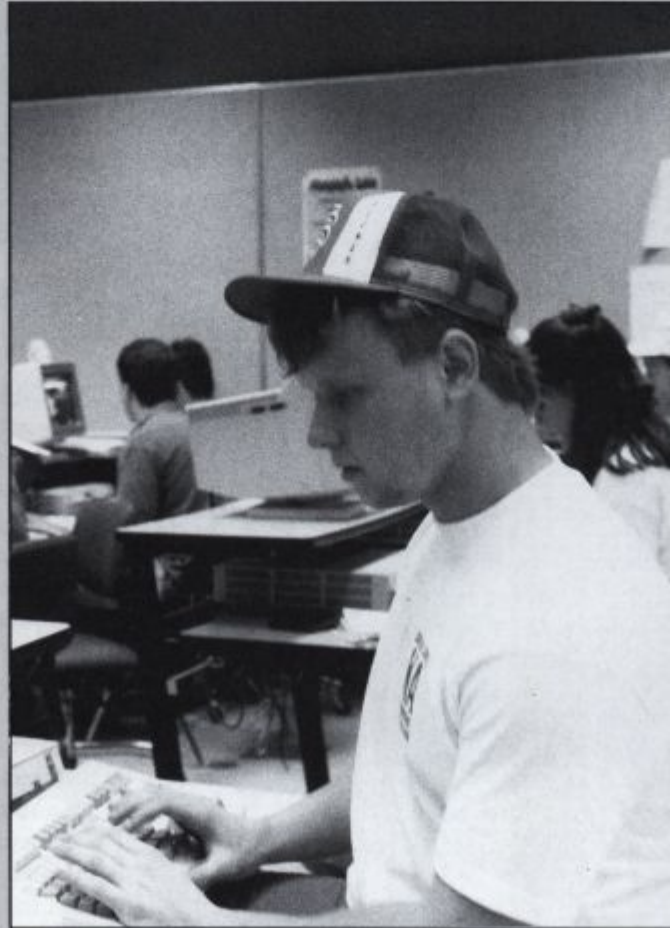

The College of Arts and Science, the largest and most diverse of the eight undergraduate colleges, represents the heart of the university. It offers over 60 majors ranging from biology and computer science to psychology and theater. Students are able to concentrate on one area of interest while taking general courses in several others resulting in a well-rounded education. Students enrolled in the College of Arts and Science fulfill general education requirements in three broad areas: Arts and Humanities; Behavioral and Social Sciences; and Natural Sciences and Mathematics. From these requirements students develop a heightened understanding of all of the aspects of human environment, intellectual curiosity, respect for fact, perception of the complexity of truth, skill in reasoning and concern for integrity and logical consistency. The breadth requirements also aid students in acquiring perceptions, skills and attitudes that will assist them in achieving a full and satisfying life as contributing members of society.

## **Dean Donnelly**

College of Business  
and Economics

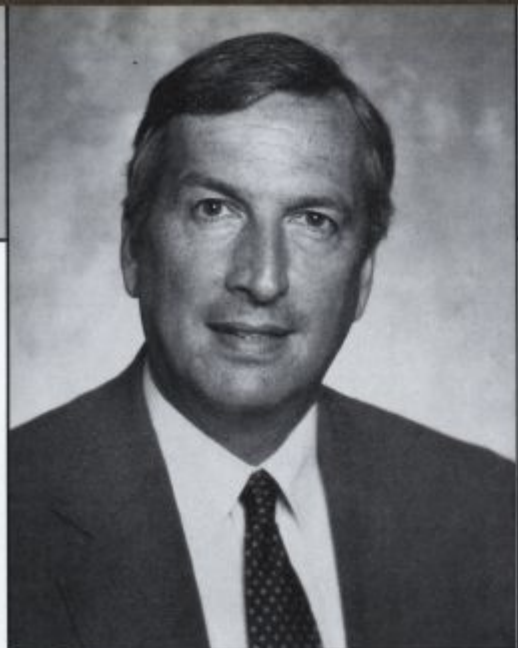

Through a wide variety of courses, students in the College of Business and Economics investigate and discover the ways in which business people, economists, government people, accountants and others work together to achieve common purpose.

The college offers baccalaureate degrees in accounting, business administration and economics. Within the business administration programs, students may choose to concentrate in administrative, marketing management, or operations management. Minors are available in business administration, economics, international business and management information/decision support systems. Both the accounting and business administration programs are fully accredited by the American Assembly of Collegiate Schools of Business.

The college makes an effort to foster the atmosphere characteristic of a small college. All courses meet in the same building. Students get to know each other and the faculty well. In this friendly and supportive environment, students feel included and much more at ease.

Students receive a solid education from the College of Business and Economics and its excellent record for placing its graduates in jobs after graduation proves it.

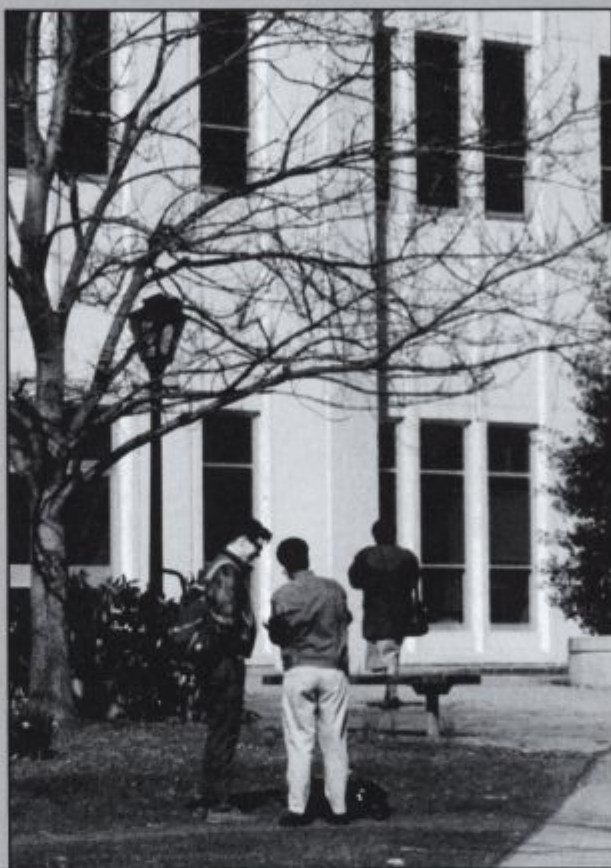

**Dean Murray**  
College of Education

The College of Education is organized into two departments: Educational Development and Educational Studies. The program in careers as teachers of normal and exceptional children in kindergarten through eighth grade. The program in Educational Studies is for students who wish to apply the study of education to careers in business, law, journalism, politics and other fields. Students benefit from having a large number of education professors who hold joint appointments in other undergraduate colleges at the university.

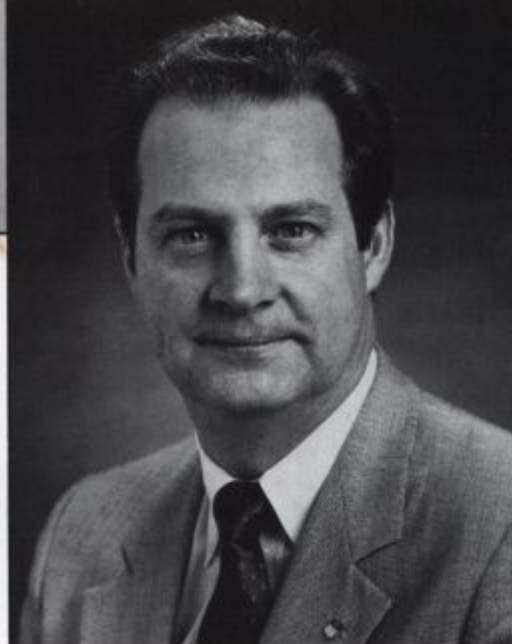

Education students do clinical work in schools throughout their program. Already observing and tutoring children in their freshman year, students gradually work toward the culmination of their clinical experience: a full semester of teaching during their senior year. The College of Education also offers students opportunities to teach at a school for learning-disabled children that is housed in the college itself. As an advocate of interdisciplinary and multi-cultural learning, the college encourages students to do their student teaching semester abroad at English-speaking schools.

The College of Education also provides advisement and assistance to students in the College of Arts and Science who wish to be certified to teach in their field of study.

# the colleges of **Education and Engineering**

## **Dean Pipes**

### **College of Engineering**

As one of the nation's top engineering schools, the College of Engineering has produced impressive graduates who have gained prominence in business, industry, government and academe.

Students may choose to major in chemical, civil, electrical, or mechanical engineering. In addition to the college's four year degree programs, five year programs are offered jointly by each of the engineering departments and the College of Arts and Science. Through this collaboration, engineering students can obtain a liberal arts education as well as a technical one.

Admission to the program is competitive. Students learn to apply mathematics, science and engineering theories to solve technical problems. Instruction is carried out in the classroom and in the laboratory.

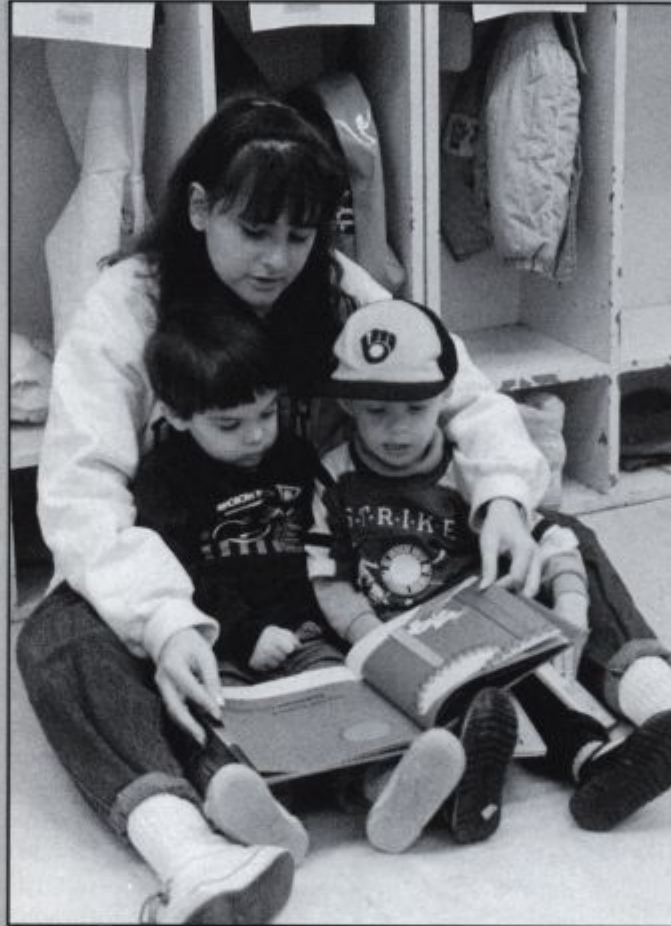

Engineering courses begin at the freshmen level. These courses deal with such subjects as chemical kinetics, digital systems, electrical networks, fluid and solid mechanics, material science thermodynamics, and transport phenomena. In general, sophomore and junior courses provide the background for application and design-oriented courses at the senior level.

The employment perspectives for engineering graduates remains structurally sound. They have a variety of career possibilities from which to choose and may specialize in research, construction, management, teaching, writing, or sales. Others continue their engineering education to the masters or doctorate degree.

# Human Resources

## **Dean Doberenz**

### College of Human Resources

The College of Human Resources offers programs that combine broad general education with professional preparation in an ever expanding field for men and women. Dedicated to improving the quality of life for individuals, families and consumers the diversified baccalaureate programs provide opportunities for a variety of challenging careers in business; industry; various public, private and government agencies; and educational all levels.

The college is organized into three departments: Individual and Family Studies, which includes life-span development education; Nutrition and Dietetics, which includes nutrition science, nutrition education, food service systems management, and hotel, restaurant, and institutional management; and Textiles, Design and Consumer Economics, which includes textile and clothing, resource management, consumer economics, and interior and apparel design. In addition, completion of a degree in human resources will enable a student to become a certified Home Economist.

All human resource students are encouraged to further develop their own particular interests and abilities through participation in the programs of the Student Center, student organizations and campus publications.

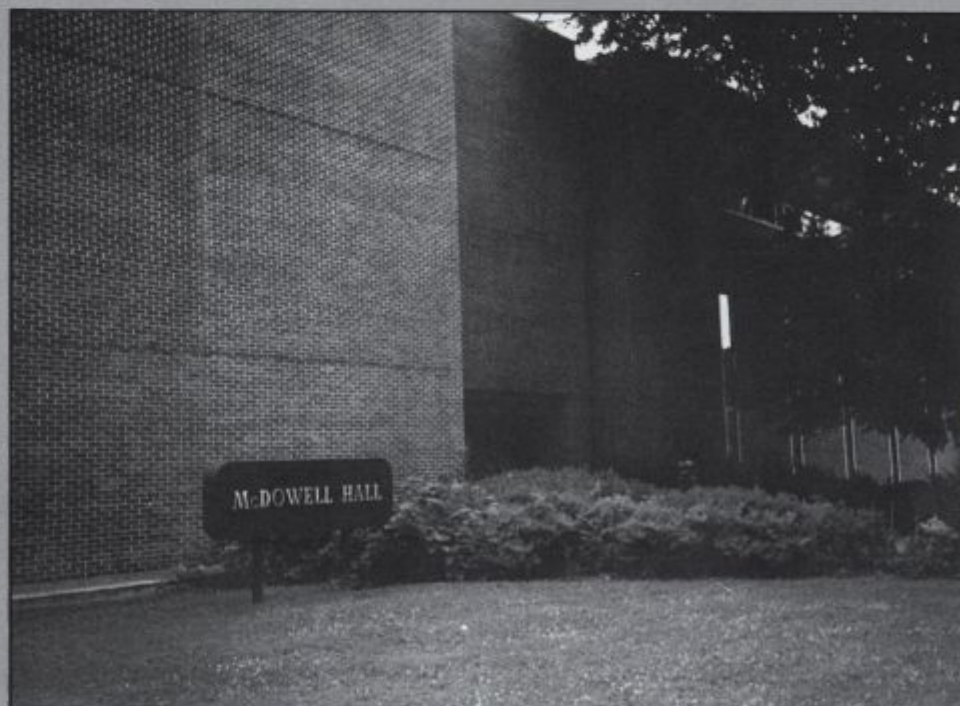

**Dean Anderson**  
College of Nursing

The four year Bachelor of Science in Nursing program is designed to develop the knowledge, understanding and skill essential for the practice of professional nursing, and to provide a basis for graduate education.

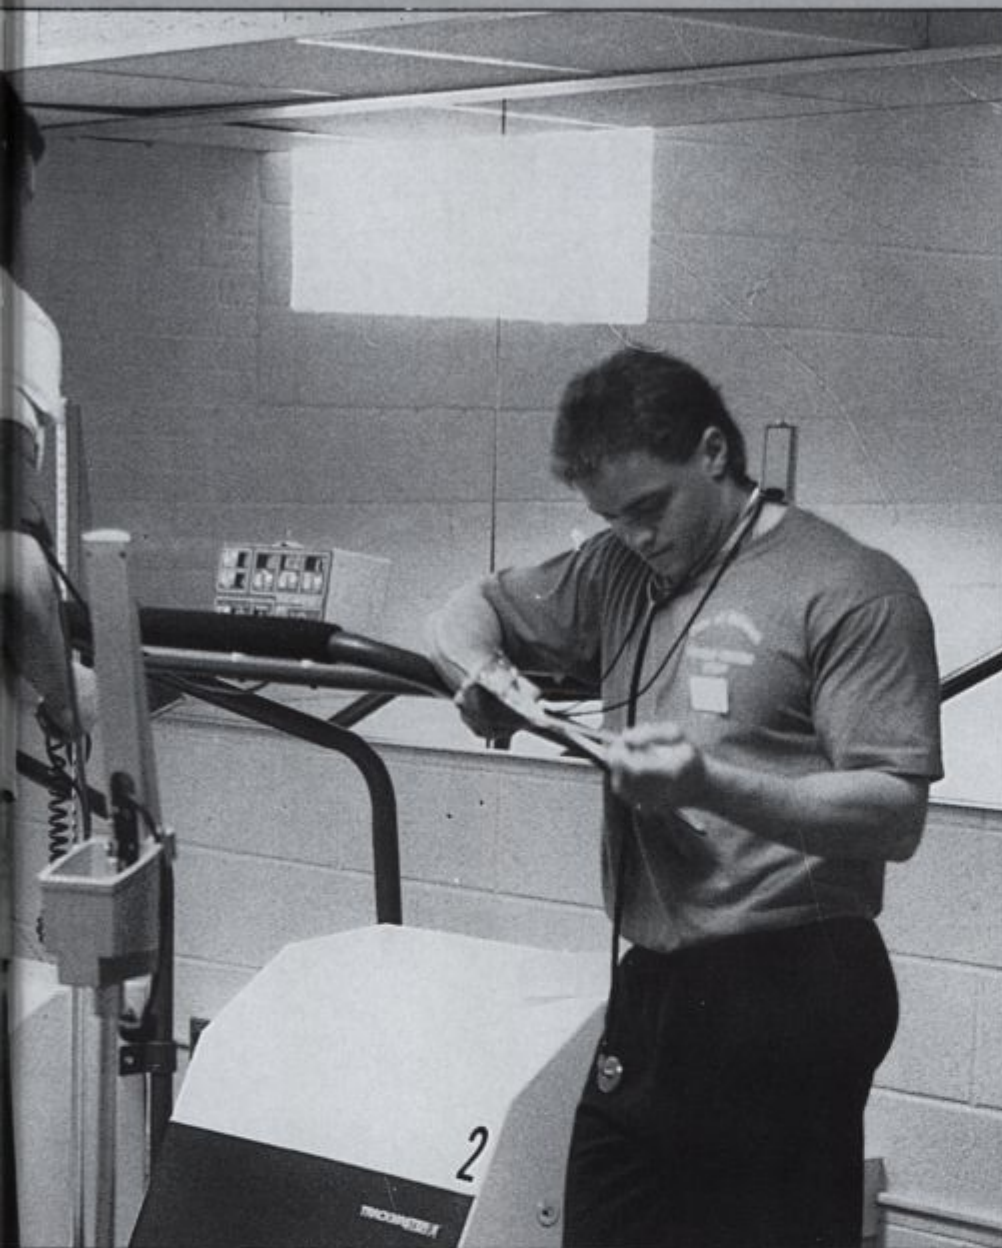

The first two years of the program include foundation courses in the natural, social, and behavioral sciences, liberal arts and an introductory nursing course. The third and fourth years of study include clinical and nonclinical nursing courses as well as liberal arts and science courses. The College of Nursing is extremely well connected to hospitals and other health care organizations in the Newark/Wilmington area. Students gain clinical experience through courses, research projects, or internships at nearby hospitals. Special facilities on campus include a simulated hospital, which consists of two nursing practice labs and a computer lab where all nursing students acquire basic computer skills.

The College of Nursing is accredited by the National League for Nursing. Students who have earned recognition for superior academic achievement may be invited for membership in Beta Xi Chapter of Sigma Theta Tau, the International Honor Society for Nursing.

## the colleges of **Nursing and Physical Education**

## **Dean Kelly**

**College of Physical Education,  
Athletics and Recreation**

The College of Physical Education, Athletics and Recreation prepares students for the diverse and expanding field of fitness. Students may choose from three degree programs. The degree in Physical Education and Health Education leads to certification for elementary and secondary school teaching and coaching. A degree in Physical Education Studies prepares students for careers not requiring teacher certification such as professions in biomechanics, exercise physiology, fitness management, and other medically related fields. The Recreation and Park Administration program prepares students for careers in the leisure services industry, including community and camp recreation and park management. Each curriculum features a liberal arts base and opportunities for in-depth study in a specialty field. Internships or clinical experiences are available in each degree option.

The activities of the college include elective lifetime sports courses, intramural sports, and intercollegiate athletics, as well as the three degree program.

The college is proud of the university's extensive athletic facilities which is used by hundreds of students daily to stay in shape.
