JUNE 1952
Volume LVI No. 6

MARYLAND AND DELAWARE - JUNE 1952

G. N. Brancato, Section Director - Baltimore, Md.

WEATHER SUMMARY

Although this was a very warm month with precipitation totals averaging slightly below normal, it will be remembered as a period of severe local storms. The occurrence of thunderstorms and hail were more frequent than ordinarily but the percentage of sunshine and the average speed of the wind were near June normals.

The most severe storms occurred on the 9-10th, the 19th, and the 29th, oddly about ten days apart. Wind gust indicators at Friendship Airport showed 80 miles per hour gusts on the 10th and 29th, equalling the all-time high record for wind speeds. These storms were reported from many local areas in Maryland and Delaware. Damage was not extensive, being limited generally to small craft on the water surfaces and to utility lines, small buildings and trees. These high winds were associated with squall lines or cold fronts sweeping across the Maryland-Delaware Section.

Rainfall was below normal except in parts of northern and western Maryland. The Lisbon area of Howard County, where April and May rains were exceptionally heavy, was within one-fifth of an inch of the greatest total of this month. Portions of Montgomery, Howard, Baltimore, and Washington Counties had rains more than one inch above normal. Most of the area near the Chesapeake Bay, as well as a portion of Washington and Frederick Counties, reported rains below normal by more than one inch. The Frederick, Conowingo, Oxford and Blackwater Refuge, Maryland, stations were below normal in rainfall by more than two inches. Although all of Delaware was below normal, only the Newark station was more than an inch deficient. Delaware monthly rains varied from 3.14 inches at Delaware City to 2.52 inches at Wilmington New Castle Airport, while in Maryland, the range was from 5.59 inches at Edgemont to 0.65 inch at Berlin. In Delaware and the extreme southeast portion of Maryland, the greatest day of rainfall was on the 1st and was associated with a well-developed system of low barometric pressure over that area. Near and to the west of the Chesapeake Bay, the greatest day of rainfall was on one of several days.

Thunderstorms were more frequent than normal, being reported in some part of the Section on 17 days. Hail was reported at scattered stations on the 9-10th, and again on the 29th.

Mean temperatures for the month averaged above normal in all areas. They were above normal by more than four degrees in the District of Columbia, and at one or two stations in Prince Georges, Howard, Baltimore, Washington, Garrett and Talbot Counties. Temperature departures of less than two degrees were confined to Harford and Cecil Counties of Maryland, and to Sussex and New Castle Counties of Delaware. For Maryland, it was the fourth warmest June of record and the warmest since 1943. For Delaware, it was the fifth warmest of record and the warmest since 1943. Delaware mean temperatures averaged from 72.7° at Wilmington Porter Reservoir to 75.7° at Dover, while the extreme range was from 47° at Georgetown on the 13th to 100° at Bridgeville, Dover, Lewes and Milford on the 26th. Maryland's mean temperature averages varied from 67.8° at Sines to 78.3° at Crisfield, and extreme readings ran from 35° at Oakland on the 2nd to 102° at Berlin and Salisbury USGS on the 26th.

The first two-thirds of the month were generally dry but rainfall was not sufficiently deficient to call it a drought. There were a number of showers at scattered locations, while the east had general rains on the 1st. During the last third of the month, rains were more frequent. Mean temperatures were near or above normal most of the month. The only mentionable below-normal period was from the 20-23rd when stagnant high barometer over the northeastern states provided a flow of easterly winds from the Atlantic Ocean. The period was marked by considerable cloudiness and frequent but light rain. The month's coolest weather came on the 3rd at most stations, and generally on the 13th at other stations, when high barometer conditions caused most temperatures to drop to the 45-55° bracket. The highest temperatures came on the 26-27th when most readings were 95° to 100°, but Garrett County's warmest weather came on the 15-16th with maxima near or a little above 90°.

Warm temperatures and generally adequate soil moisture provided fine conditions for all phases of crop development during June. - H.L.A.

CORRECTIONS

MONTH: NOVEMBER 1951

 Table 3:
 Ocean City

Daily amounts recorded on 15th, 16th and 17th should be on 14th, 15th and 16th.

MONTH: ANNUAL 1951

 Table 1:
 Waterloo Police Barracks

 Mean temp for December should be 37.8°;
 Annual mean temp should be 55.1°.

 Table 2:
 Huntingtown

Precip total for December should be 5.42; departure from normal, +2.27; Annual precip total, 43.97; Departure from normal, -0.80.

 Table 2:
 Waterloo Police Barracks

 Precip total for December should be 4.48;
 Annual total should be 49.69.

 Table 2:
 Savage River Dam

Average precip for December should be 4.21; Annual total should be 41.10.

 Table 3:
 Waterloo Police Barracks

Lowest temp for 1951 should be 1° in December.
