

Isla Vista, California: two marine terrace views. 1978

Isla Vista, California. Late Pleistocene (MIS 3) marine terrace deposit overlying the Santa Barbara Formation. Contact marked by arrow. Location of this site is ~400 meters west of the west (left) edge of the Isla Vista photo below.

Isla Vista, California. Photograph from the website of the Univ. of California, Santa Barbara [<http://www.ucsb.edu/>]. View is looking north. The age of this terrace deposit was estimated by AAR to be roughly 50 ka (Wehmiller et al., 1977b) and ultimately confirmed by U-Th coral dating (Trecker et al., 1998).
